MESSAGE FROM THE PRESIDENT OF IAHR

Prof. Philippe Gourbesville
President
International Association for Hydro-environment Engineering and Research (IAHR)

I am pleased to invite you to the 41st International Association for Hydro-Environment Engineering and Research (IAHR) World Congress in Singapore (IAHR2025 Singapore), taking place from 22 to 27 June 2025 at the Singapore EXPO. The biennial IAHR World Congress returns to Asia for the first time since 2017 with the theme “Innovative Water Engineering for Sustainable Development”. Hosted by PUB, Singapore’s National Water Agency, IAHR2025 Singapore aims to promote interdisciplinary dialogue among water actors and share innovative solutions to address the major water challenges faced at the world scale. Within the context of accelerating actions for the water sector, more than 140 technical sessions featuring close to 800 oral presentations and over 300 posters will be presented at this year’s Congress on the latest innovative concepts, technologies, best practices and case studies on key challenges facing the water industry, including climate change mitigation, improving resilience against water hazards and natural disasters, water engineering for energy transition and food security, nature based solutions as well as digital transformation. These technical sessions will be augmented by more than 34 special sessions, 5 workshops and 4 masterclasses.

IAHR2025 Singapore will be unique for several reasons. Co-located with the Singapore International Water Week Spotlight 2025, IAHR2025 Singapore delegates can look forward to participating in high-level panels and sessions with more than 300 leaders from governments, cities, utilities, and industries. In particular, I am delighted that senior officials from more than 40 cities are expected to attend SIWW Spotlight 2025 and IAHR2025 Singapore. The presence of these leaders will no doubt enrich the discussions with members of IAHR. Also, for the first time, the IAHR World Congress will feature a full-scale exhibition. With a total gross area of close to 2,000sqm, more than 66 international exhibitors will be showcasing their solutions, products and services to delegates and trade visitors.

I wish to express my appreciation to the local National Organising Committee and the International Scientific Committee for their hard work and dedication.

I look forward to meeting all of you in Singapore in June at IAHR2025!

MESSAGE FROM THE CHAIR OF THE INTERNATIONAL SCIENTIFIC COMMITTEE

Prof. Adrian Law
Executive Director
Coastal Protection and
Flood Resilience Institute (CFI)
Singapore

On behalf of the International Scientific Committee, I am delighted to invite you to come to the 41st IAHR World Congress which shall take place from 22 to 27 June 2025 in the vibrant city of Singapore. This year's Congress is centred around the theme of "Innovative Water Engineering for Sustainable Development". The theme underscores our commitment to derive innovative approaches in engineering and research, to address the complex challenges of an evolving hydro-environment due to climate change in a sustainable manner, ensuring the long-term well-being of both the community and society.

We are thrilled by the impressive array of high-quality abstracts across all Congress themes and topics, proactive organisation of numerous Special Sessions by members on significant and timely topics, as well as global participation of delegates from both developed and developing countries. Participants can look forward to a carefully curated technical programme, designed to inspire knowledge exchange and foster conversation and collaboration among global experts.

We invite you to join us in Singapore for an extraordinary Congress, full of exciting ideas, valuable insights, and engaging dialogue!!!

PROGRAMME AT A GLANCE

	AM		PM		EVENING	
22 June (Sun)	Workshops / Masterclasses					
	Technical Visits					
23 June (Mon)	Opening	Keynotes	Technical & Special Sessions	Technical & Special Sessions	Welcome Reception	
	Solutions Marketplace @ SIWW Spotlight 2025 & IAHR2025					
24 June (Tue)	High Level Panel 1	High Level Panel 2	Technical & Special Sessions	Technical & Special Sessions	Young Professionals Network Night	
	Solutions Marketplace @ SIWW Spotlight 2025 & IAHR2025					
25 June (Wed)	High Level Panel 3 / Technical & Special Sessions	High Level Panel 4 / Technical & Special Sessions	Technical & Special Sessions	Technical & Special Sessions		
	Solutions Marketplace @ SIWW Spotlight 2025 & IAHR2025					
			John F. Kennedy Student Paper Competition			
26 June (Thu)	Technical & Special Sessions	Technical & Special Sessions	Technical & Special Sessions	Technical & Special Sessions	General Members Assembly	Awards & Congress Dinner
	Solutions Marketplace @ SIWW Spotlight 2025 & IAHR2025					
27 June (Fri)	Technical Sessions	Technical Sessions	Closing Ceremony	Technical Visit		

Solutions Marketplace (Exhibition) | IAHR2025 Singapore Sessions

(As of 5 March 2025)

INTERNATIONAL SCIENTIFIC COMMITTEE AND REVIEWERS

INTERNATIONAL SCIENTIFIC COMMITTEE

- Adrian Law, National University of Singapore/Nanyang Technological University, Singapore (Co-Chair)
- Hazel Khoo, PUB, Singapore
- Philip Liu, National University of Singapore, Singapore
- Vladan Babovic, National University of Singapore, Singapore
- David McCarthy, Monash University
- Stefan Felder, UNSW Sydney
- Lloyd Chua, Deakin University
- Sandra Soares-Frazao, Universite Catholique de Louvain
- Tobias Bleninger, Federal University of Paraná
- Majid Mohammadian, University of Ottawa
- Bryan W. Karney, University of Toronto
- Christos Katopodis, Katopodis Ecohydraulics Ltd
- Gregory Lawrence, University of British Columbia
- David Zhu, Ningbo University / University of Alberta
- Zhiguo He, Zhejiang University
- Pengzhi Lin, Sichuan University
- Dongdong Shao, Beijing Normal University
- Wenxin Huai, Wuhan University
- Yangwen Jia, China Institute of Water Resources and Hydropower Research (IWHR)
- Jianyun Zhang, Nanjing Hydraulic Research Institute
- Qiuwen Chen, Nanjing Hydraulic Research Institute
- Shijian Fu, Chongqing Normal University
- Yujun Yi, Beijing Normal University
- Qiuhua Liang, Zhengzhou University
- Nian Sheng Cheng, Zhejiang University
- Haifeng Jia, Tsinghua University
- Fang He, Zhejiang University
- Zhengzhi Deng, Zhejiang University
- Jochen Aberle, Leichtweiß-Institute for Hydraulic Engineering and Water Resources
- Silke Wieprecht, University of Stuggart
- Ting Fong May Chui, The University of Hong Kong
- Mohamed S. Ghidaoui, The Hong Kong University of Science and Technology
- Huan-Feng Duan, The Hong Kong Polytechnic University
- K Murali, Indian Institute of Technology Madras
- Subhasish Dey, Indian Institute of Technology Jodhpur
- Manasa Behera, Indian Institute of Technology Bombay
- Sannasi Sannasiraj, Indian Institute of Technology Madras
- Corrado Gisonni, Università della Campania 'Luigi Vanvitelli'
- Claudia Adduce, Roma Tre University
- Silvia Meniconi, University of Perugia
- Claudio Comoglio, Politecnico di Torino
- Hitoshi Tanaka, Tohoku University
- Norio Tanaka, Saitama University
- Sung-Uk Choi, Yonsei University
- Jin-Hwan Hwang, Seoul National University
- Eun-Sung Chung, Seoul National University of Science and Technology
- Tae-Woong Kim, Hanyang University
- Joseph Hun-Wei Lee, Macau University of Science and Technology
- Chun Kiat Chang, River Engineering and Urban Drainage Research Centre (REDAC), Universiti Sains Malaysia
- Gerald Augusto Corzo, IHE Delft Institute for Water Education
- Ellis Penning, Deltares
- Bas Jonkman, TU Delft
- Asaad Shamseldin, University of Auckland
- Mark Davidson, University of Canterbury
- José Maria Santos, University of Lisbon
- Pilar García-Navarro, Universidad de Zaragoza, Q5018001G
- Francisco Martínez-Capel, Universitat Politècnica de València
- Anton J. Schleiss, Ecole Polytechnique Fédérale de Lausanne (EPFL)
- Volker Weitbrecht, ETH Zürich
- Christina Tsai, National Taiwan University
- Howard Hao-Che Ho, National Taiwan University
- Chia-Ren Chu, National Central University
- Dong-Jiing Doong, National Cheng Kung University
- Shih-Chun Hsiao, National Cheng Kung University
- Kim Irvine, Thammasat University
- Roger Falconer, Cardiff University
- Thorsten Stoesser, University College London
- Vladimir Nikora, University of Aberdeen
- Dubravka Pokrajac, University of Aberdeen
- Jaan Pu, University of Bradford
- Fabian Bombardelli, University of California, Davis
- Harindra Joseph Fernando, University of Notre Dame
- Gary Parker, University of Illinois Urbana-Champaign
- Heidi M. Nepf, Massachusetts Institute of Technology
- George Constantinescu, IIHR - Hydroscience & Engineering, The University of Iowa
- Panayiotis (Panos) Diplas, Lehigh University
- Gregory Pasternack, University of California, Davis
- Oliver Fringer, Stanford University
- Zhenhua Huang, University of Hawai'i at Mānoa
- Robert Ettema, Colorado State University
- Thi Thanh Nga Pham, Vietnam Institute of Meteorology, Hydrology, and Climate Change (IMHEN)

REVIEWERS

- Benjamin Dewals, University of Liege
- Pieter Rauwoens, KU Leuven
- Eduardo Yassuda , Tetra Tech South America
- Carlos Galvao, Federal University of Campina Grande
- Van-Thanh-Van Nguyen, McGill University
- Sylvie Spraakman, City of Vancouver
- Ahmad Shakibaeinia, Polytechnique Montréal
- Shooka Karimpour, York University
- Ioan Nistor, University of Ottawa
- Hossein Bonakdari, University of Ottawa
- José Adriasola-Velasco, Bechtel
- Lu Wang, Sichuan University
- Qian Yu, China Institute of Water Resources and Hydropower Research
- Gensheng Zhao, Nanjing Hydraulic Research Institute

- Ana Margarida Bento, University of Porto
- Daniela Molinari, DICA – Politecnico di Milano
- Adriana Mercedes Márquez-Romance, University of Carabobo

MAIN THEME, SUB-THEMES AND TOPICS

MAIN THEME — INNOVATIVE WATER ENGINEERING FOR SUSTAINABLE DEVELOPMENT

The 41st IAHR World Congress 2025 in Singapore (IAHR2025 Singapore) is a landmark event that centers around the pivotal theme of innovative water engineering for sustainable development. The global gathering will address the multifaceted challenges posed by the dynamic intersection of water resources management, climate change adaptation, and the intricate interplay between water, energy, food security, and nature. It shall provide a platform for experts, researchers, and practitioners from around the world to converge and share cutting-edge insights, groundbreaking research, and new solutions in the field of water engineering to meet these challenges.

As nations grapple with the effects of climate change, the Congress will delve into innovative water engineering that adapts to the evolving challenges posed by a changing hydro-environment. Another focal point of the Congress will be the exploration of innovative concepts that alleviate the increasing pressure on the water-energy-food nexus and acknowledge the intrinsic linkages between these vital resources. Understanding and optimizing this nexus is crucial for fostering sustainable development, and the Congress shall promote the global exchange and collaboration for integrated approaches that maximise these interconnected resources.

Finally, a key objective of the 41st IAHR World Congress 2025 in Singapore is to address the United Nations Sustainable Development Goals (SDGs) related to water resources. These goals encompass a spectrum of global targets to tackle issues ranging from water scarcity and quality to sanitation and ecosystem preservation. By placing a spotlight on innovative water engineering, the Congress aims to contribute to the advancement of these SDGs in both rural and urban environments, towards a resilient society for the well-being of current and future generations.

SUB-THEME A — WATER ENGINEERING AND TECHNOLOGICAL INNOVATIONS

A.1 Climate Change Mitigation
A.1.1 Water Footprint Reduction
A.1.2 Incorporation of Water-related Renewable Energies
A.1.3 Energy Efficiencies to be Gained from Water Uses
A.1.4 Carbon Sequestration and Storage in Aquatic Environments
A.1.5 Reduction of Greenhouse Gas Emissions from Water Systems
A.1.6 Other Related Topics

A.2 Improving Resilience against Water Hazards and Natural Disasters
A.2.1 Coastal Processes and Hazards
A.2.2 Hydraulic Structures and Processes
A.2.3 Enhancements in Urban Drainage Systems
A.2.4 Sediment Transport and Bathymetrical Changes Assessment
A.2.5 Forecasting and Warning
A.2.6 Disaster Risk Reduction
A.2.7 Other Related Topics

A.3 Water Engineering and Society
A.3.1 Water Resources Management
A.3.2 River Engineering and Management
A.3.3 Reservoirs Management
A.3.4 Urban Hydraulics
A.3.5 Eco- and Environmental Hydraulics
A.3.6 Water Reclamation and Reuse
A.3.7 Seawater Desalination
A.3.8 Cross-boundary Water Transfer
A.3.9 Alternative Water Resources
A.3.10 Multi-objective Optimisation
A.3.11 Other Related Topics

A.4 Water Engineering for Energy Transition and Food Security
A.4.1 Reservoir Renewable Energy Systems (Hydropower, Floating Solar, etc)
A.4.2 Marine Renewable Energy Systems (Wave Power, Tidal Power, Hybrid Solutions, etc)
A.4.3 Offshore Renewable Energy Systems (Offshore Wind Power, Oceanic Current Power, etc)
A.4.4 Water-Energy-Food Nexus
A.4.5 Water Management for Urban Agriculture
A.4.6 Water for Hydrogen Production
A.4.7 Blue Economy
A.4.8 Other Related Topics

A.5 Digital Transformation
A.5.1 Artificial Intelligence (AI) Tools for Analysis and Decision Support under Certainties
A.5.2 Computational Methods for Climate and Meteorology
A.5.3 Computational Methods for Hydraulic and Water Quality Modelling
A.5.4 Computational Methods for Coastal Processes (Waves, Currents, etc)
A.5.5 Data-Driven Methods and Machine Learning Techniques
A.5.6 Hydroinformatics and Big Data Analytics
A.5.7 Other Related Topics

A.6 Experimental and Field Methods
A.6.1 Advanced Experimental Techniques
A.6.2 Hydrological Measurements (Flow, Groundwater, Precipitation, etc)
A.6.3 Water Quality Sampling and Analysis
A.6.4 Aquatic Ecology and Biological Surveys
A.6.5 Environmental Management and Monitoring
A.6.6 Remote Sensing – Satellite
A.6.7 Remote Sensing – Others (Unmanned Aerial Vehicles (UAV), Radar, etc)
A.6.8 GIS Applications
A.6.9 Data Uncertainty Analysis and Assessment
A.6.10 Other Related Topics

SUB-THEME B — WATER ENGINEERING AND SOCIO-ECONOMIC CONSIDERATIONS

B.1 Climate Change Adaptation
B.1.1 Coastal Protection and Management
B.1.2 Flood and Droughts Management
B.1.3 Improvement in Design Guidance under Climate Change
B.1.4 Revised Engineering Practices in Harmony with Nature
B.1.5 Resilience Strategies for Extreme Events
B.1.6 Adoption of Green and Grey Water Infrastructure
B.1.7 Other Related Topics

B.2 Water and Nature
B.2.1 Innovative Solutions for City in Nature with Water
B.2.2 Nature-based Solutions for Upstream Catchments and Small Streams
B.2.3 Nature-based Solutions for Large Rivers
B.2.4 Nature-based Solutions for Coastal and Estuarine Waters
B.2.5 Biodiversity in Aquatic Environments
B.2.6 Ecosystem Services
B.2.7 Other Related Topics

B.3 Hydro-Environment Engineering Culture
B.3.1 Hydro-Environment History and Heritage
B.3.2 Hydro-Environment Development and Cooperation
B.3.3 Hydro-Environment Education
B.3.4 Coastal Resilience and its Definitions
B.3.5 Social Hydrology and Citizen Science
B.3.6 Other Related Topics

WORKSHOPS AND MASTERCLASSES

22 June 2025 (Sunday)

AM	PM	
WORKSHOP 1: ADVANCEMENTS IN AIR-WATER FLOWS IN OUTLET STRUCTURES OF RESERVOIR DAMS		
WORKSHOP 2: BLUEMATH: AN OPEN-SOURCE, PYTHON FRAMEWORK WITH INTERACTIVE NOTEBOOKS FOR STATISTICAL ANALYSIS AND SIMULATION OF COASTAL CLIMATE HAZARDS IN A CHANGING CLIMATE		
WORKSHOP 3: MACHINE LEARNING APPROACHES FOR HYDROLOGIC MODELLING AND DATA QUALITY ASSESSMENT		
WORKSHOP 4: ADVANCES IN EXPERIMENTAL AND NUMERICAL RESEARCH ON THE FAILURE OF EARTH DAMS AND FLUVIAL DIKES BREACHING		
WORKSHOP 5: INTEGRATING MULTIPHYSICS SIMULATION FOR ADVANCED WATER ENGINEERING SOLUTIONS		
MASTERCLASS A: NATURE-BASED SOLUTIONS FOR FLOODING AND WATER MANAGEMENT RESILIENCE IN A CHANGING CLIMATE		
MASTERCLASS B: STATIONARITY ASSESSMENT OF HYDROCLIMATIC EXTREMES: METHODS AND APPLICATIONS	**MASTERCLASS C:** ENVIRONMENTAL DATA MANAGEMENT AND DECISION SUPPORT FOR FLOOD MONITORING AND DISASTER RESILIENCE	**MASTERCLASS D:** ADVANCED APPROACHES IN THE PHYSICAL MODELLING OF HYDRAULIC STRUCTURES

LISTING OF WORKSHOPS

WORKSHOP 1: ADVANCEMENTS IN AIR-WATER FLOWS IN OUTLET STRUCTURES OF RESERVOIR DAMS

22 June 2025 (Sunday) | 9:45am – 4:45pm
Convenors: Simone Pagliara, Matthias Bürgler, David F. Vetsch, Robert M. Boes

Fee: S$100
**Includes 2 x coffee / tea breaks.*

Synopsis
Reservoir dams are vital hydraulic infrastructure, playing a key role in water resources management for irrigation and drinking water supply, hydroelectric generation, and flood mitigation, among others. The outlet structures of reservoir dams including low- and mid-level outlets and spillways are unique in terms of scale and dissipated power outputs. The operational safety of these structures critically depends on accurate predictions of high-velocity air-water flows, as inadequate design can lead to catastrophic consequences. Furthermore, with the aging of existing infrastructure and the necessity to adapt to evolving hydrological conditions driven by climate change, many dams will require significant refurbishment and upgrades in the near future. This highlights the strong need for robust design guidelines for high-velocity air-water flows in outlet structures of reservoir dams.

This workshop aims to convey the most recent scientific findings relevant for the safe design of air-water flows in outlet structures of reservoir dam, targeting both the research community and practitioners.

WORKSHOP 2: BLUEMATH: AN OPEN-SOURCE, PYTHON FRAMEWORK WITH INTERACTIVE NOTEBOOKS FOR STATISTICAL ANALYSIS AND SIMULATION OF COASTAL CLIMATE HAZARDS IN A CHANGING CLIMATE

22 June 2025 (Sunday) | 9:30am – 5:30pm
Convenor: Fernando Mendez

Fee: S$155
**Includes 2 x coffee / tea breaks. Minimum 5 participants required for workshop to start.*

Synopsis
In the face of increasing global challenges such as coastal hazards and climate change, the use of robust statistical and numerical analysis tools is essential. Tools that facilitate the analysis of multivariate met-oceanic climatic drivers (e.g., waves, storm surges, tropical and extratropical tropical cyclones) acting at multiple spatial and temporal scales are key for predicting flooding events, producing risk assessments or planning for adaptation measures. The development of applications for analysing coastal hazards in a changing climate demand not only accessibility to such tools but also the flexibility to combine them seamlessly to generate valuable insights and solutions. Within this context, BlueMath-Hub emerges as a collaborative platform of many research groups and universities around the world working together to democratise the access to advanced models and services, empowering both researchers and non-specialists to generate customised, complex solutions.

To the best of our knowledge, it is the first tool developed for this purpose. BlueMath promotes collaboration and innovation among scientists while enabling a more resilient future through easily accessible, customizable, and scalable solutions.

WORKSHOP 3: MACHINE LEARNING APPROACHES FOR HYDROLOGIC MODELLING AND DATA QUALITY ASSESSMENT

22 June 2025 (Sunday) | 9:30am – 5:30pm
Convenor: Ramesh S. V. Teegavarapu

Fee: S$125
**Includes 2 x coffee / tea breaks.*

Synopsis
This workshop aims to introduce the concepts of Machine Learning (ML) approaches for hydrologic modelling and data quality assessment and improvement. The workshop will focus on the fundamentals of ML techniques for hydrologic forecasting, data quality improvement, and approaches supporting water resources management.

The participants are expected to learn more about the ML tools and explore their functioning. In addition, they would be introduced to generic techniques for model calibration, validation, predictor selection, and model evaluation. At the end of the workshop, the participants are expected to acquire sufficient knowledge to appreciate the different ML techniques and be able to select the best techniques to solve real-world hydrologic problems.

WORKSHOP 4: EXPERIMENTAL AND NUMERICAL RESEARCH ON THE FAILURE OF EARTH DAMS AND FLUVIAL DIKES

22 June 2025 (Sunday) | 9:30am – 5:30pm
Convenors: Sílvia Amaral and Matthew Halso

Fee: S$100
**Includes 2 x coffee / tea breaks. Minimum 10 participants required for workshop to start.*

Synopsis
This workshop focuses on ongoing research efforts related to the failure of earth dams and fluvial dikes. It will explore state-of-the-art experimental techniques and advanced numerical modelling approaches aimed at addressing the complex behaviour of these structures under diverse conditions. Participants will gain exclusive insights into the groundbreaking developments in both fundamental understanding (i.e., phenomenology and underlying processes) and practical applications (i.e., engineering solutions). The event will showcase how theoretical knowledge translates into real-world engineering practices, offering a comprehensive view of both basic science and applied research in the field.

Participants will engage in hands-on sessions, round-table discussions, and live presentations that highlight the synergy between the experimental and numerical modelling. This workshop will provide the knowledge and tools to tackle the challenges of dam and dike safety in an evolving landscape for academics, industrial professionals or policymakers, being an invaluable opportunity to network, share knowledge, and collaborate on future innovations in the safety and resilience of hydraulic structures of this kind.

WORKSHOP 5: INTEGRATING MULTIPHYSICS SIMULATION FOR ADVANCED WATER ENGINEERING SOLUTIONS

22 June 2025 (Sunday) | 9:30am – 5:30pm
Convenor: Yao Xin

Fee: S$300
**Includes 2 x coffee / tea breaks. Minimum 10 participants required for workshop to start.*

Synopsis
Multiphysics simulation plays a pivotal role in modern water engineering, enabling the modelling of complex interactions between physical phenomena such as fluid flow, heat transfer, solid mechanics, and chemical reactions. This integrated approach leads to more accurate predictions, optimised designs, and innovative solutions for real-world challenges.
In this hands-on workshop, participants will explore the capabilities of COMSOL Multiphysics® for simulating and optimising water engineering applications. Step-by-step tutorials and case studies will guide attendees through modelling multiphysics phenomena.

LISTING OF MASTERCLASSES

MASTERCLASS A: NATURE-BASED SOLUTIONS FOR FLOODING AND WATER MANAGEMENT RESILIENCE IN A CHANGING CLIMATE

22 June 2025 (Sunday) | 9:30am – 5:30pm
Convenors: Ellis Penning, Catherine Wilson

Fee: S$100
**Includes 2 x coffee / tea breaks.*

Synopsis
The masterclass will begin with an introductory lecture which covers the concept of Nature-based Solutions (NbS) and generic aspects of NbS design and siting. This will be followed by two sessions, a morning and an afternoon session, where group-based discussions with two instructors and a selected group of students discuss their PhD proposals or their on-going research project. The morning session will focus on process-based research to characterise and quantify hydraulic and hydrological processes in a field and laboratory setting. The afternoon session will focus on quantifying NbS from a modelling perspective, considering aspects such as input data requirements, and spatial and temporal resolution for capturing different scale processes using either a hydrodynamic, hydrological and/or a computational fluid dynamics (CFD) code. Each participant will have approximately 45 minutes to discuss their work in detail. Participants will be asked to submit/give a ten-minute presentation to the group at the beginning of their time slot.

MASTERCLASS B: STATIONARITY ASSESSMENT OF HYDROCLIMATIC EXTREMES: METHODS AND APPLICATIONS

22 June 2025 (Sunday) | 9:30am – 11:00am
Convenors: Priyank J. Sharma, Ramesh S. V. Teegavarapu, Achala Singh

Fee: S$50
**Excludes coffee / tea breaks.*

Synopsis
Long-term hydroclimatic series are evaluated in research studies focused on climate change and variability assessments. In general, hydrologic design relies on the assumption of stationarity of hydroclimatic extremes and its assessment becomes an essential initial task. Stationarity, in the context of design floods, may imply their time invariance and the constant probability of failure of a given water resource structure for its entire design life. However, the assumption of stationarity may lead to over- or under design, in cases where the time series is indeed non-stationary. Stationarity, a cornerstone in hydraulic design, is now under scrutiny due to anthropogenic activities and climate change. Non-stationarity is also attributed to several factors such as human interventions (e.g., land use and cover alterations, reservoir regulations), occurrences of sporadic natural hazards (e.g., forest fires, volcanic eruptions, earthquakes), the low frequency components of oceanic-atmospheric phenomena (e.g., Pacific Decadal Oscillation, Atlantic Multidecadal Oscillation, and El Nino-Southern Oscillation), and global warming.

MASTERCLASS C: ENVIRONMENTAL DATA MANAGEMENT AND DECISION SUPPORT FOR FLOOD MONITORING AND DISASTER RESILIENCE

22 June 2025 (Sunday) | 11:30am – 1:00pm
Convenor: Nicole Nally

Fee: S$50
**Excludes coffee / tea breaks and lunch.*

Synopsis
Aquarius uses best in class environmental data management software to enable collection, curation, and transformation of environmental data into actionable data. With numerous deployments in high-risk areas around the world, the Aquatic Informatics team and the Aquarius platform bring a wealth of experience in deploying global system for risk monitoring and management.

This masterclass will focus on data acquisition, data curation and transformation to data dashboard that provide actionable data to frontline risk management for key stakeholders. The Aquatic Informatics team will provide examples from actual deployments around the world.

MASTERCLASS D: ADVANCED APPROACHES IN THE PHYSICAL MODELLING OF HYDRAULIC STRUCTURES

22 June 2025 (Sunday) | 2:00pm – 3:30pm
Convenor: Muhammed Hashid

Fee: S$50
**Excludes coffee / tea breaks. Minimum 35 participants required for masterclass to start.*

Synopsis
The proposed masterclass will be focusing on the recent advancements in the physical modelling of hydraulic structures with elaborated discussions based on the research and case studies conducted in the hydraulics laboratory of IIT Roorkee, India. The physical modelling history of IIT Roorkee dates back to 1857, when the institute was established with the construction of the Upper Ganga Canal. The hydraulics laboratory then evolved in unique ways to the current advancements with modern instrumentation in the last 175 years which handles a discharge of more than 2.5m3/s. The masterclass will be highly insightful for the participants, as it will motivate young researchers towards experimental hydraulics.

Advancements in hydraulics are essential in the current and future worlds, as we are facing severe environmental and climatic changes across the globe, which calls for more interventions from hydraulic engineers. The masterclass includes a discussion on modelling aspects of the dynamic behaviour of structures in flow and waves, hydrodynamic studies based on advanced imaging techniques, fluvial hydraulic modelling, and advancements in scaling issues for various hydraulic structures. The session will help to improve the understanding of the relevance of planning and designing of hydraulic and hydrologic structures.

KEYNOTES AND SPEAKERS

To be announced shortly.

HIGH-LEVEL PANELS

To be announced shortly.

SPECIAL SESSIONS

Session 1: 5TH GLOBAL WATER SECURITY SEMINAR: WATER AND BIODIVERSITY

Convenor: Chang Yuan
Organised by Ministry of Water Resources of China and World Water Council

The Global Water Security Seminar is a yearly flagship event jointly hosted by the Ministry of Water Resources of China and the World Water Council, focusing on different topics for each of its edition with a common objective of promoting global water security. Building on the success of its four previous editions, the 5th Global Water Security Seminar: Conserving Biodiversity—Fishpass Cases Around the World will see high level officials and international experts on fishpass construction, management and optimization, biodiversity etc., sharing latest policy progress and best practices, with the aim of maintaining and restoring biodiversity as a key for promoting global water security.

Session 2: ADAPTIVE MANAGEMENT OF RIPARIAN VEGETATION IN THE ERA OF CLIMATE CHANGE

Convenors: Takashi Asaeda, Rohan Benjankar and Dongdong Shao

Riparian areas in many parts of the world have been encroached with grasses, shrubs and trees, a.k.a. "from white to green river,". This phenomenon prevails in regulated rivers due to changes in flow regime, as well as in unregulated rivers due to temperature and precipitation changes. This causes various socio-environmental issues, including 1) habitat change, 2) flood risk increase, and 3) landscape change, etc. Adaptive management strategies may be feasible to mitigate the negative effects of this regime shift while optimizing the positive effects. This special session will present and discuss research and practices relevant to solving this prominent issue facing the Ecohydraulics community.

Session 3: ADVANCED MEASURING TECHNIQUES FOR OCEAN WAVES AND CURRENTS

Convenor: Prof. Dong-Jiing Doong

This special session is essential for sharing the latest developments in monitoring and analysing wave and current dynamics. Accurate measurement techniques are crucial for understanding coastal processes, ocean circulation, and environmental changes, which directly impact marine engineering, climate research, and coastal management. This session aims to bring together experts, researchers, and practitioners to discuss innovative tools, methodologies, and technologies that enhance the precision and efficiency of wave and current measurements. By facilitating knowledge exchange, the session seeks to advance the field and foster collaborations that address current challenges in marine and coastal environments.

Session 4: ADVANCED TECHNOLOGIES APPLIED FOR FLASH FLOOD DEFENCE AND MANAGEMENT

Convenors: Qiang Ma, Dedi Liu and Philippe Gourbesville

Over recent years, the occurrence of extreme rainfall shows a significant increasing trend in the world, especially in the mountainous area that often causes serious flash flood disasters. In order to address new challenges and to explore operational technologies and approaches of flash flood defence and prevention, this session will mainly focus on advanced hydro informatics solutions of flash flood prevention from strategies and methods to tools and applications.

Session 5: ADVANCES ON THE STUDY OF VEGETATION IN A VARIETY OF SETTINGS

Convenors: Florian Cordier, Heidi Nepf, Damien Violeau, Vladimir Nikora and Kamal El Kadi Abderrezzak

In the last decades, vegetation in fluvial and coastal areas has been a focus in environmental management for both its negative and positive impacts. Therefore, understanding and modelling the physical processes associated with macrophytes placed in a flow is becoming increasingly important in the engineering community. This special session will share the latest advances on the study of vegetation in the context of hydraulic science and engineering, aiming to facilitate the dissemination of the latest discoveries. A specific time slot will be dedicated at the end of the session to meet the speakers, which offers an exceptional opportunity for - especially early career - scientists to share with presenters and enlarge their network.

Session 6: CONCEPT OF ADAPTATION – COASTAL MEASURE AND CLIMATE CHANGE

Convenor: Yang Zi Qian

This session is centred on the concept of adaptation. As we plan our coastal protection strategies and waterfront infrastructure, climate change is bringing numerous of challenges, uncertainties, and even opportunities. We must ask ourselves what role should adaptation play in these changing circumstances? For centuries, our focus was on expanding, sometimes at the expense of nature. We are now realizing that our growth and development must work in harmony with nature. As a result, our solutions are increasingly nature-oriented, nature-based, or at least hybrid approaches that incorporate natural elements.

The purpose of this session is to bring together experts and professionals to explore what it means to be adaptive in the context of our coastal environments. We will discuss best practices, lessons learned, and the challenges we face. Finally, we will consider what our future coastlines should look like to remain adaptive in the face of ongoing (climate) change.

Session 7: CURRENT RESEARCH IN COASTAL PROTECTION AND FLOOD RESILIENCE CONDUCTED IN CFI SINGAPORE

Convenors: Koh Chan Ghee, Raymond Ong, Qian Xudong and Adrian Law

The Coastal Protection and Flood Resilience Institute (CFI) Singapore, hosted by the National University of Singapore, collaborates with Nanyang Technological University, Singapore University of Technology and Design, Singapore Institute of Technology, and A*STAR. CFI focuses on two horizontal and two vertical research areas. The horizontal areas include coastal science to understand climate change impacts and digitalization to enhance coastal predictions. The vertical areas focus on adaptive, multifunctional engineering solutions for Singapore's coasts, and nature-based solutions with guidelines for implementation. These CFI sessions will showcase ongoing research from CFI’s experts, addressing coastal protection and flood resilience.

Session 8: DAM SAFETY: ADDRESSING MODERN CHALLENGES AND FUTURE RISK

Convenors: Ashutosh Sharma and Eduardo Mario Mendiondo

With the growing challenges posed by climate change, ageing dam infrastructure, and increasing societal reliance on dams, ensuring their safety is of paramount importance. This session aims to bring together global experts, policymakers, and practitioners to discuss cutting-edge research, innovative safety practices, and lessons learned from diverse experiences. Key focus areas will include risk assessment, structural and operational safety, emergency preparedness, and the integration of digital technologies for monitoring and maintenance. By fostering interdisciplinary collaboration, the session seeks to address critical challenges and pave the way for sustainable and resilient water resource management globally.

Session 9: DEBRIS AND DRIFTWOOD ACCUMULATION AT HYDRAULIC STRUCTURES

Convenors: Davide Wüthrich, Isabella Schalko, Sébastien Erpicum and Elena-Maria Klopries

Recent floods have highlighted the impact of driftwood and debris accumulation at hydraulic structures like bridges and culverts, which reduce waterway capacity, cause upstream flooding, and exacerbate flood damage. This special session aims to bring together researchers from around the world who are studying the accumulation of driftwood and large floating debris. It will provide a platform for sharing knowledge, discussing ongoing research, and exploring potential solutions that could lead to optimized and more effective flood resilience and debris management strategies.

Session 10: EARTH OBSERVATION TO MONITOR LAND AND WATER ECOSYSTEMS

Convenors: Michael Nones and Melissa Latella

Earth Observation (EO) provides massive amounts of data about land and water surfaces, leading to a paradigm shift in observing and measuring ecosystem dynamics across multiple spatiotemporal scales. This special session will focus on recent advances in EO for the monitoring of land and water ecosystems, offering a short overview of the state-of-the-art, addressing current challenges, and discussing future developments. We invite abstracts that deal with this topic from different perspectives, including but not limited to: EO integration with in-situ measurements, generation of new monitoring service, use of new sensors, knowledge disclosed by EO-based monitoring, use of EO data for numerical modelling, and impacts on policy and management.

Session 11: EDUCATION AND PROFESSIONAL DEVELOPMENT: THE NEEDS OF WATER PROFESSIONALS IN A CHANGING ENVIRONMENT AND SOCIETY

Convenors: Ioana Popescu, Reinhard Hinkelmann, Philippe Gourbesville

We are proposing an IAHR conference session exploring the landscape of professional education in water engineering. Within this session comprehensive presentations will showcase how academic institutions aim to enhance the skills and knowledge necessary for addressing contemporary challenges in the water sector. Shaping the future of water professionals through innovative educational programmes and research opportunities. The speakers of this session will present different educational programmes, as well as ways to get a water programmeme recognised/labelled by IAHR. A series of 4-6 programmes will be presented followed by a 20–30-minute discussion with presenters.

Session 12: EMERGING ISSUES FOR WATER MANAGEMENT IN REMOTE REGIONS WITH INTERPLAY OF CLIMATE CHANGE SOCIAL, ECONOMIC, AND ENVIRONMENTAL FACTORS

Convenors: Satoru Oishi, Ramesh S. V. Teegavarapu, Elpida Kolokytha, Carlos de Oliveira Galvão

This session invites contributions summarizing and discussing water management problems and experiences in remote regions focusing on climate change and variability combined with social, economic, and environmental issues. Remote regions refer to those that are economically distressed, underdeveloped, and lack the infrastructure to handle problems related to evolving climate and other regional stresses. Climate change impacts in many of these regions make it critical to address the issue of water and natural resource management. The planned session is expected to attract studies from different regions of the world addressing the described core issues.

Session 13: ENHANCING WATER AND SOCIAL RESILIENCE IN URBAN AREAS: A CALL FOR CITY WATER LEADERS

Convenor: Elpida Kolokytha
Co-organised with IAHR, UNESCO IHP, CRSRI, AUTH UNESCO cat.II CIMWRM.

The event aims to enhance our understanding of integrating diverse climate adaptation and mitigation measures into urban resilience strategies. By adopting a "learning cities approach," participants will share exemplary practices, learn from global cities, and develop innovative solutions collaboratively. Discussions will focus on engineering, policy, and community-based approaches to improve water and social resilience in urban areas. Key topics include increasing water availability, strengthening drought resistance, promoting flood protection, reducing water pollution, and safeguarding aquatic ecosystems, ÄI critical challenges posed by climate change in urban settings. Helping cities to better ensure a resilient and sustainable future.

Session 14: ENVIRONMENTAL RESTORATION AND PROTECTION IN SEAS AND COASTS: RECENT CASES FROM SPAIN

Convenor: José Francisco Sánchez González

The need to protect marine and coastal areas has intensified due to climate change and unsustainable human practices. This special session will show recent coastal restoration and protection initiatives led by the Spanish Ministry for Ecological Transition and Demographic Challenge. These projects aim to enhance water quality, increase coastal resilience and protect biodiversity. Topics will include relevant examples the main beach/wetlands restoration projects, some of the most recent strategies for coastal protection in two Mediterranean regions of Spain, and a description of a set of measures developed to strengthen the governance of the seas included in the Spanish Marine Spatial Plans.

Session 15: FLOOD ADAPTATION AND RESILIENCE

Convenors: Reza Ahmadian, Vasilis Bellos and Pierfranco Costabile

Flooding affects more people globally than any other natural hazard. It is known that humans cannot stop flooding everywhere, particularly as the severity and frequency of floods have significantly increased recently. Therefore, in addition to aiming to reduce the occurrence of floods, it is important to enhance adaptation and resilience to more severe flooding. This Session will focus on research and engineering solutions related to increased flood risk adaptation and improved resilience, including—but not limited to—enhanced understanding of the impacts of flooding, such as the effects on humans and vehicles, flood evacuation planning, resilient solutions like sponge cities and blue-green infrastructure, and resilient infrastructure.

Session 16: FLOOD HAZARD PROJECTIONS AND ADAPTATION STRATEGIES IN LOW LYING COASTAL AREAS

Convenors: Andrea Sulis and Ioan Nistor

The question of how to adapt low lying coastal areas to flood hazard of the future is of great concern ‚Äì not only for scientists and engineers, but also for policy makers and risk practitioners. The proponents of this special session invite theoretical, methodological, and empirical studies to better understand future flood hazard in coastal areas and potential adaptation strategies. Multidisciplinary approaches across spatial and temporal scales are encouraged, especially in relation to definition of the best practices providing a critical analysis and identifying the challenges in their adoption and recommendations for their upscaling.

Session 17: GUIDELINES FOR ADAPTATION TO CLIMATE CHANGE IN WATER ENGINEERING

Convenor: Roberto Ranzi

This session invites experts who contributed to the IAHR Monograph on water engineering design guidance in a changing climate prepared by the Technical Committee on Climate Change Adaptation. It aims at providing a guidance to professionals, researchers and policy makers for assessing observed and projected impact of climate variability and change on the hydro-systems and to adapt the practice of engineering design of hydraulic infrastructures and water resources management to such changes.

Session 18: IMPACT OF CLIMATIC EXTREMES ON RIVER SYSTEMS

Convenors: Senlin Zhu and Yuankun Wang

Rivers are valuable resources to our planet. However, they are vulnerable to interferes induced by natural and anthropogenic activities. Given the anticipated rise in extreme climatic events, it becomes imperative to accurately quantify their impacts on rivers, and novel methods by coupling multiple sources of data and modeling techniques are especially needed, which can provide reference for decision-makers about the sustainable management of rivers.

Session 19: INAUGURAL COASTAL PROTECTION ASEAN SYMPOSIUM

Convenor: Singapore Water Association (SWA) Coastal Protection Chapter

Session 20: INNOVATIVE APPROACHES TO URBAN RESILIENCE: ADDRESSING FLOOD RISKS AND CLIMATE ADAPTATION

Convenors: Gensheng Zhao and Ana Margarida Bento

This session highlights innovative strategies that link flood risk management, climate adaptation and urban resilience. It focuses on integrating digital twin systems with advanced tools such as remote sensing, satellite imagery, drones and machine learning for accurate flood mapping and early warning. We seek contributions that focus on multidisciplinary approaches, including 1D, 2D, and 3D modelling, computational fluid dynamics (CFD), LiDAR, GIS, and IoT sensor networks. Submitted works should offer practical solutions for addressing the challenges of rising sea levels, extreme rainfall, and climate change impacts to improve urban water management. Join us in promoting sustainable, resilient strategies for managing future urban flooding.

Session 21: INNOVATIVE WATER ENGINEERING FOR SUSTAINABLE DEVELOPMENT IN LATIN AMERICA

Convenor: Luiz H. Maldonado
The session is being held jointly by the Latin American Division of Hydraulics of IAHR, the Brazilian Water Resources Association (ABRHidro), and Itaipu Binacional

The objective of the session is to provide an environment for sharing studies conducted in the Latin American region on the sub-themes of "Water Engineering and Technological Innovations". The session will be an excellent opportunity for the Latin American scientific community to join the IAHR World Event to discuss the future of water resources, hydraulics and the long-term sustainability of the region. We invite the Hydraulics and Water Resources Associations of Latin America to participate. Representatives from the IAHR Latin American Division will be present at the session and will select the best papers for publication in the Ribagua journal.

Session 22: INTEGRATED FLOOD RISK MANAGEMENT (IFRM): FROM SCIENCE TO PRACTICE

Convenors: Daniela Molinari and Stefan Haun

Integrated Flood Risk Management (IFRM) promotes flood resilience and sustainable development, by solutions that address multiple spatial and temporal scales, integrate environmental considerations, and combine structural and non-structural measures. While widely recognized in literature and policy, its practical implementation especially in developing countries—remains limited. Bridging the gap between theory and practice demands interdisciplinary collaboration to design effective, scalable solutions. Building on discussion from the 2023 IAHR Congress in Vienna, this session seeks to enhance collaboration among researchers, practitioners, and managers. It encourages sharing best practices and lessons learned from IFRM applications worldwide. Contributions are welcome on modelling approaches, technological innovations, methodologies, policy frameworks, and multidisciplinary strategies that advance IFRM implementation and resilience-building efforts.

Session 23: INTERNATIONAL SYMPOSIUM ON COASTAL RESOURCES AND ENVIRONMENT (CORE2025)

Jointly organised by Hohai University (China), University of Auckland (New Zealand), Beijing Normal University (China), National University of Singapore (Singapore) and Southern Marine Science and Engineering Guangdong Laboratory (China).

The International Symposium on COastal Resources and Environment (CORE) is a platform for researchers to exchange ideas, make new connections, cultivate young researchers and hence advance this field of research. Six sessions are planned: (1) estuarine hydrodynamics and sediment dynamics, (2) biophysical interactions and biomorphodynamics, (3) blue carbon in tidally dominated environments, (4) estuarine systems as buffers against climate change, (5) sustainability of human-sea coupled coastal wetland systems, and (6) technological advances and nature-based solutions.

Session 24: NATURE-BASED SOLUTIONS CONNECTING SCIENCE AND PRACTISE WORKSHOP

Convenors: Ellis Penning, Catherine Wilson, Gary Lei

This special session is a workshop where we connect science and practise to discuss how to make a Nature based Solution scheme successful. The workshop will focus on behind-the-scenes aspects of NbS schemes and include aspects of financing, governance, internal processes as well as the stages that led to the co-design of the scheme and draw from real NbS schemes examples such as Bishan Ang Mo Kio Park (Singapore), Severn Valley and/or Project Groundwater (UK) schemes. This workshop will involve audience participation; we will discuss the importance of stakeholder involvement, stages leading to implementation, what type of efforts are needed to really make it happen and what kind of practical lessons learnt can be shared.

Session 25: NATURE-BASED SOLUTIONS FOR WATER SECURITY: RECENT PROGRESS IN MONITORING, EVALUATION, AND REPORTING

Convenor: Perrine Hamel

Nature-based solutions – actions to protect, restore, or manage natural ecosystems to address societal challenges – have great potential to enhance water security worldwide. Since nature-based solutions are embedded in complex social, technological, and ecological contexts, their implementation often challenges conventional approaches to monitoring, evaluation, and reporting (MER) of watershed management. To address these complexities, this session explores recent advances in MER practices by highlighting innovative methods and indicators tailored to diverse environmental, cultural contexts. By recognizing the plurality of worldviews and success metrics—spanning ecological, social, and economic dimensions—this session promotes a holistic approach to understanding and managing nature-based solutions for water security.

Session 26: NEW HYDROINFORMATICS STRATEGY AND APPLICATION OF CATCHMENT DIGITAL TWIN

Convenors: Qiang Ma, Xiaoxiang Zhang and Philippe Gourbesville

With the development of hydro informatics technology, the new challenges and opportunities in the field of catchment digital twin has been widely discussed in many water societies and committees. Comparing with the classical approaches applied in watershed management, the add values of new strategies, methods and tools such as the AI and machine learning approaches applied for forecasting and early warning, the integrated distributed hydro-simulations applied for virtually representing the hydro-elements in the catchment, and the high performance computation technology applied for supporting the real-time decision-making process, will be all deeply discussed in this session.

Session 27: OUTFALL SYSTEMS AND EFFLUENT DISCHARGES

Convenor: Majid Mohammadian

This special session focuses on the topic of wastewater outfall systems including discharges of domestic, industrial or desalination waste streams to inland and coastal receiving waterways. The planning, design and siting of outfalls is a complex task that relies on many disciplines including oceanography, civil and environmental engineering, marine biology, construction, economics, public relations and social and cultural matters. The primary purpose of the special session is to bring together a broad range of these disciplines and to provide a forum for presentations and discussion relating to recent research and real-life case studies.

Session 28: RIVER ETHICS AND WATER ENGINEERING

Convenors: Philippe Gourbesville and Xin He

Globally, rivers are in critical danger, which urgently calls for new solutions. At the 2023 UN Water Conference, an initiative was proposed to construct River Ethics. Additionally, the 10th World Water Forum saw the release a report titled River Ethics and China's Practices, which was subsequently made available in multiple languages at the 3rd Asia International Water Week. A book on River Ethics is underway, addressing the ethical dilemmas humanity faces in river protection and advancing the ontological concept of harmony between humans and nature. This special session will discuss the theories and practices of River Ethics, particularly the integration of River Ethics into real-world engineering and management.

Session 29: SAFETY ASSESSMENT FOR INSTREAM INSTALLATIONS USING MULTI-SENSOR-BASED REMOTE TECHNOLOGY

Convenors: Sung-Uk Choi and Chang Geun Song

This special session will cover research contents on 'Safety assessment technology for instream installations based on integrated measurement technology'. The detailed research technologies are (1) river crossing water resources facility measurement technology using remote sensing techniques, (2) river crossing water resources facility damage detection technology based on measurement data, (3) river crossing water resources facility integrated monitoring platform technology, and (4) river crossing water resources facility safety assessment technology, which is represented by four strategies: Measurement, Analysis, Visualization, and Evaluation.

Session 30: SEDIMENT MANAGEMENT FOR RESERVOIR SUSTAINABILITY

Convenors: Kamal El Kadi Abderrezzak and Eddy Langendoen

Sedimentation, leading to the loss of the storage capacity of dam reservoirs, is a growing problem worldwide, further exacerbated by climate and land use changes. This special session aims at sharing knowledge and tools for applying effective strategies to counter sedimentation. We solicit papers presenting 1) methods and technologies for predicting and tracking reservoir sedimentation; 2) multidisciplinary studies, including both successful and ineffective experiences in field deployment of management strategies; and 3) guidelines on how to design and select technically and economically the best management solutions.

Session 31: SOCIO-ECONOMIC CHALLENGES IN ASIA: FUTURE ROLES OF URBAN WATER NETWORK MODELLING AND OPTIMIZATION

Convenors: Donghwi Jung and Alvin Chew

This special session aims to facilitate knowledge exchange and best practices on emerging challenges of urban water management, with a particular focus on Asian countries. The session will highlight their cutting-edge insights and innovative techniques designed to efficiently and effectively address water-related issues in urban areas.

Session 32: SURROGATE TECHNIQUES FOR MONITORING SEDIMENT TRANSPORT IN FLUVIAL AND TRANSITIONAL SYSTEMS

Convenors: Slaven Conevski and Massimo Guerrero

The proposed session aims to present and discuss the most recent results and experiences achieved by advanced surrogate techniques, such as optical, acoustic and imaging methods. This Special Session invites contributions that address advanced and novel aspects of measuring sediment transport in rivers and transitional areas using surrogate techniques (e.g., acoustic, optical, imaging, remote sensing). Contributions may cover a variety of topics ranging from field and laboratory studies towards the understanding of fundamental processes, the validation of surrogate methods and the assessment of novel devices, methodology and data analysis performance.

Session 33: TRANSPORT DYNAMICS OF PLASTIC POLLUTION IN AQUATIC ENVIRONMENTS

Convenors: Matthias Kramer and James Lofty

Plastic pollution is now found in most environmental compartments, and an increasing number of studies highlights the impacts of plastics at different levels, urging for interdisciplinary efforts. To date, limited knowledge is available on the transport mechanisms of plastics in water bodies, and more research is required to tackle the plastic problem in an efficient manner. We welcome contributions on the dynamics, transport, and fate of plastics in aquatic environments, ranging from urban networks to freshwater systems and marine settings. Most welcome are physical/experimental and numerical modelling studies on the transport dynamics of plastics, with a focus on methods and techniques.

Session 34: TRENDS AND VARIATIONS IN HYDROCLIMATIC VARIABLES: LINKS TO CLIMATE VARIABILITY AND CHANGE

Convenors: Priyank J. Sharma, Ramesh S. V. Teegavarapu and Achala Singh

This session focuses on the application of statistical techniques for objectively assessing trends in hydroclimatic variables at different temporal and spatial scales to assess any discernible links to climate variability and change. This session aims to explore the applicability of emerging techniques and approaches for detecting stationarity in hydroclimatic time series. Research studies unraveling the effects of climate variability on hydroclimatic conditions at local and global scales will be appreciated. Further, research studies assessing the co-evolution of hydroclimatic variables under the influence of climate variability and change will also be welcomed.

Session 35: UNITING FOR WATER: GLOBAL COLLABORATION TO TACKLE WATER CHALLENGES

Convenor: Intan Supraba

The invited speakers in this session will address the unresolved water issues faced by various countries, influenced by economic, technical, and socio-political factors. These issues include water supply systems, barrier lake hazards, water pollution, contaminants, and flooding in the context of climate change. One proposed solution is the implementation of Nature-Based Solutions. We invite academics, industry professionals, and government officials to attend and engage in discussions with the speakers. By the end of the session, our goal is to promote international collaboration in tackling these challenges.

Session 36: WATER SYSTEM OPERATION AND DIGITAL TWIN

Convenors: Xiaohui Lei, Chao Wang, Siyu Cai

The water system covers the whole water cycle in both nature and human settlements. Specifically, it is referred to as basins and trans-basin water systems. For all the water system operations, what we do is to provide an optimal management of water resources. Therefore, how to rely on the accurate operation of water projects and adopt new technologies and integrated modeling platforms to build a complex water resource scheduling technology aiming at five major water security issues in water systems, such as flood control, water supply, water ecology, water environment and water project safety, is the core technical problem of current water system operations. We welcome presentations on digital twin development of different complexities and maturity levels for diverse water systems (river, basin, urban, water diversion project). Moreover, we welcome presentations on applications that integrate hydrological processes in natural and human settlements for improved integrated water management using digital solutions.

ORAL AND POSTER PRESENTATIONS

LISTING OF ORAL PRESENTATIONS

SUB-THEME A: WATER ENGINEERING AND TECHNOLOGICAL INNOVATIONS

A.1 CLIMATE CHANGE MITIGATION

A.1.1 Water Footprint Reduction

Harnessing Advanced Technologies To Optimize Industrial Water Footprint Reduction
Jimmy Yu and Wenny Noha

A.1.2 Incorporation of Water-related Renewable Energies

An Archimedes Screw Based Barrier Modification System: Synergistic Approach To Nature Restoration And Renewable Energy Generation
Kristina Petra Zubovic, Calvin Stephen, Patrick Morrissey, John Byrne, Mary Kelly-Quinn and Aonghus McNabola

A.1.3 Energy Efficiencies to be gained from Water Uses

Factors Determining The Efficiency Of Drinking Water Production Locations In The Netherlands
Mattheus de Koning, Mario E. Castro-Gama and Koen Hogeboom

Test Bench For The Validation Of Technical Solutions For Energy Flexibility In Water Supply Networks
François Nuc, Pierre Archambeau, Patrick Hendrick and Sébastien Erpicum

A.1.4 Carbon Sequestration and Storage in Aquatic Environments

Similarity Solutions For Axisymmetric Gravity-Driven Forchheimer Flow In Porous Media
Alessandro Lenci, Luca Chiapponi, Vittorio Di Federico and Sandro Longo

The Influence Of Stratified Shear Instabilities On Particle Sedimentation With Application To Marine Carbon Dioxide Removal
Adam Jiankang Yang and Mary-Louise Timermans

Adapting A Numerical Mangrove Growth Model For Assessing Australian Coastal Wetlands
Steven G. Sandi, Masaya Yoshikai, Siegmund Nuyts, Wendy Timms, Peter Macreadie and Stacey Travathan-Tackett

A.1.5 Reduction of Greenhouse Gas Emissions from Water Systems

Lifecycle Assessment As Applied To Full-Scale Wastewater Treatment Infrastructure
Sailaja Poudel, Peter Leonard, Sean Mulligan and Eoghan Clifford

Carbon Emission Reduction From Integration Of Existing Hydropower And Proposed Floating Solar Photovoltaic At Sutami Dam Indonesia
Didik Ardianto, Abdul Razaq and Fahmi Hidayat

CO2 And CH4 Emissions Of The Upper Yellow River On The Tibetan Plateau: Freeze–Thaw Seasonal Variations And Environmental Controls
Chen Li, Wei Wu, Hang Chen, Lei Ren and Xiao Kang

Assessing The Impact Of Cascade Dam Operation On Atmospheric Co_2 Concentration Using Satellite Remote Sensing
Yuanyuan Wang, Yurong Wang and Jianmin Zhang

A.1.6 Other Related Topics

Numerical Simulation Study On The Excavation Of An Auxiliary Traffic Tunnel In A Hydropower Station
Yonglai Zheng, Jiaji Chen and Jiayu Zhong

A Sensitivity Analysis Of The New Design Of Overflow Spillways: Weirs With Varying Profile
Fatna Oukaili, Clara Hawkins, Yvan Bercovitz and Thomas Fonty

Flow Patterns In A Supercritical Vortex Drop Shaft
Gaetano Crispino, Filomena Maietta, Michele Iervolino and Corrado Gisonni

3d Scour Due To Low-Inclined Circular Jets In Cohesive Soils: A Preliminary Analysis
Michele Palermo, Huan Wei, Ajit Kumar, Fabian Bombardelli and Simone Pagliara

Hydrodynamic Impacts On Bridge Decks: A Comprehensive Literature Review
Stefano Pagliara, Ajit Kumar, Huan Wei and Michele Palermo

Hydrodynamic Characteristics Of Submerged Turbulent Wall Jets
Rajesh K. Mahato, Subhasish Dey and Sk Zeeshan Ali

Estimation Of Efforts In The Lower Beam Of Segment Gates Subject To Hydraulic Jump Waves
Paulo Povh, Raquel Takeda, Fernanda Yamakawa, Marcelo Takenobu, Marcelo Noriller, Iversom Castro and Lucas Valentim

Experimental Study For Determination Of Peak Discharge Formula For Earth Dam Failure
Jeongmin Lee, Sung Won Park and Seongil Yeom

Effects Of A Channel Bend On The Supercritical Flow Characteristics And Sediment Movements Leading To Nonuniform Invert Abrasion
Subhojit Kadia, Nils Rüther and Elena Pummer

Mitigating Saltwater Intrusion Through The Neo-Panamax Locks
Maria Gabriela Castrellon, Carlos Lu, Zheng Bing Wang and Ioana Popescu

Identifying Bridges Susceptible Of Large Wood Accumulations: A Lesson Learnt From Satellite Observations
Diego Panici and Prakash Kripakaran

Assessing The Impact Of Flood Events On Seasonal Hypoxia Using D4pdf Database In The Ariake Sea, Japan
Lin Hao, Lin Hao, Yasuyuki Maruya, Satoshi Watanabe and Shinichiro Yano

Investigating The Effects Of Size And Overtopping Conditions On Dike Breach Evolution Through Medium-Scale Laboratory Experiments
Masoumeh Ebrahimi, Nathan Delpierre, Catherine Swartenbroeks, Didier Bousmar and Sandra Soares-Frazao

Introduction To The Effect Of Flow Under Vertical Angled Baffle Walls On Bedload Transport
Tino Kostic and Nils Rüther

Investigation Of Hydraulic Jump Roller Toe Dynamics In Open Channel Flows
Jiayue Hu and Hubert Chanson

Repeatability In Human Body-Structure Interactions In Experiments To Assess Hazards To Public Safety For A Low Head Dam Retrofit
Seyed Ali Mahdizadeh, Kerry Anne Mazurek, Hayden Reitenbach and David Sumner

Hydraulic Assessment Of Tunnel Spillway Using 3d Numerical Model
Rahil Ahmad and Hariom Gautam

Insights Into Analysis Of Density-Varied Turbulence In Hydraulic Jumps
Mohammadmehdi Ramezani and Shooka Karimpour

The Use Of Artificial Vegetation As A Replacement For Natural Vegetation In Air-Water Flow Modeling
Anne Mozer, Harish Selvam and Holger Schüttrumpf

Flow Features Of Open Channel Confluence Over A Gravel Surface: The Influence Of Surface Roughness
Zhipeng Yuan and Saiyu Yuan

Investigation Of Suspended Sediment And Turbine Erosion For The Sustainable Operation Of A Planned Low-Head Hydropower Plant
Ismail Albayrak, David Felix, Nevin Cracknell, Maximilian Kastinger and Robert Boes

Relationship Between The Morphology And Impact Characteristics Of Cavitation Bubbles Collapse Near Elastic Boundary
Jie Li, Tong Qu, Jiayao Bao and Zhuoqi Zhao

Influence Of The Diameter In Air-Water Single Tip Conductivity Probes
Edwin Casa, Jose Maria Carrillo, Luis Castillo and Juan García

Experimental Study On Shock Wave Characteristics Of Cavitation Bubble Collapse Near Rigid Wall Under Low Ambient Pressures
Tong Qu, Jie Li, Zhuoqi Zhao and Jiayao Bao

The Brisk Project: A Comprehensive Approach To Bridge Scour Risk In The Face Of Climate Change
Ana Margarida Bento

Numerical Investigation Of Blockage Effects Of The Spur Dike Field Under Tidal Bore Interactions Using Openfoam
Nandhini Duraimurugan, Holger Schuettrumpf, Harish Selvam and Murali Kantharaj

Crack Segmentation Application Using Unet Deep Learning Model For Hydraulic Structures
Jaehyun Shin, Kyuhyun Park, Seongwook Choi and Dong Sop Rhee

Low-Impact Weirs Contributing To Sustainable Development Goals
James Zulfan, Laura Montano, Fiona Johnson and Stefan Felder

CFD Analysis Of Geysering Behavior In Storage And Drainage Tunnels: Influence Of Flow Rate, Vent Pipe Dimensions, And Slope Changes
Dong Yeol Lee and Kyong Oh Baek

Hydrodynamic Analysis Of Riverbed Scouring Around Low Weir Using Flow-3d
Siti Nurain Che Mohd Azmi, Saerahany Legori Ibrahim, Izihan Ibrahim and Dani Irwan Masbah

Optimization Analysis Of Aerator Shape In Slight Slope Spillway Tunnels With Low Froude Number
Qin Yue, Wang Zhigang, Li Ling, Chen Yongcan and Liu Zhaowei

Corrugated Rough Aprons As A Countermeasure Against Local Scour Downstream Of Submerged Wall Jets With Shallow Tailwater Depths
Pramit De and Dhrubajyoti Sen

Research On Energy Dissipation And Defoaming Facilities For Siphon Wells By Cfd Models
Yan Liu and Li Zeng
Experimental Study On Lateral Overflow Angle In Straight Open Channel
Koji Asai, Yuya Mito and Katsutoshi Watanabe

Reynolds Number Effects On Turbulence Characteristics Of Hydraulic Jumps With Undeveloped Inflow Conditions
Ryugen Satoh, Masayuki Takahashi and Iwao Ohtsu

Cavitation Characteristics And Remedial Measures For Pressure Tunnel
Zhigang Wang, Panhong Ren and Dong Zhang

Design Of A Hydraulic Laboratory Experimental Set Up For Observing Suspended Sediment Transport And The Deposition In A Pipes
Jeong Yoon-Hwan and Hong Seung Ho

A.2.3 Enhancements in Urban Drainage Systems

A Review Of Sponge City Concept Implementation In Yogyakarta, Indonesia
Vicky Ariyanti, Shakti Rahadiansyah, Aprilia Putri Kurniawan, Farah Risti Hafshah and Muhammad Sulaiman

Non-Cohesive Sediment Transport During Steady-Flow Flushing Operations In Sewer Pipes
Zhi Yang, Biao Huang and David Zhu

A Risk-Based Approach To Identify Vulnerability Hotspots In Urban Aquifers Under Minimum Data Requirements
Karen Rojas-Gomez, Sifat Siddik, Diego Novoa-Vazquez and Peter Krebs

Urban Coasts And Extreme Events In Spain
Jose M. Grassa

Evaluating Blue-Green Infrastructure For Urban Flood And Drought Mitigation Under Changing Climate Scenarios
Xuan Wu and Patrick Willems

Rain Gardens Performance Review In Hong Kong: A Case Study
Sai Shing Chim, King Ho Wong, Selina Wai Man Fong, Ching Man Lee, Chuen King Kwok, Chun Yee Joey Tang, Yang Liu and Kai Wu

Cost-Effective And Ensemble-Based Algorithm For Cyber-Physical Attack Identification On Water Distribution Systems Based On Unsupervised Time-Series Data Analytic
Zukang Hu, Jun Zhang and Xiaoguo Zhou

Experimental Study Of The Bifurcation Tunnel Structure And Comparison With The Prototype
Gerardo Ruiz

Implementing Urban Pluvial Floods' Mitigation Measures In An Interactive Tool Built With Open Data
Diego Novoa Vazquez, Mattia Paolini, Bjoern Helm and Peter Krebs

Hydrological Performance Of Permeable Pavement Systems Designed Using Recycled Materials To Reduce The Impact Of Flooding
Simon Terkura and Shatirah Akib

Machine Learning Approaches For Efficient Leak Detection In Water Distribution Systems
Amir Noori, Ehsan Roshani and Hossein Bonakdari

Numerical Investigation On The Mechanisms Of Air-Water In The Deep Tunnel Downstream Of A Dropshaft
Zhaolin Zheng, Nian Ye and Yiyi Ma

Exploring The Potential Of Deep Tunnel Systems And Low Impact Development Integration For Urban Stormwater Management
Marvin John Uy, Miguel Enrico Robles, Chiny Vispo, Yugyeong Oh and Leehyung Kim

A Research Progress Review On Optimal Placement Of Iot Sensors In Urban Drainage Networks
Tianyu Guo and Yiyi Ma

Qatar Web Portal For Spatiotemporal Rainfall, Climate Resilience, And Urban Development
Hassan Qasem, Niels-Erik Jorgensen, Husam Abdullah Samman, Ataur Rahman and Ali Hussain Haddad

Simplified Models And Tools For Real-Time Control In Urban Run-Off Management Case Studies
Sacha Gobeyn, Stijn Van Hoey, Tameremariyam Belachew, Arnout Roukaerts, Evi Vinck, Birgit De Bock, Rita Hochstrat, Michael Thomann, Ming Chang and Vittorio Di Federico

Adapting Urban Drainage Management Under Climate Change. Madrid Region Case Study
Jaime Botello Herranz, Antonio Lastra de la Rubia and Celia Ortega Flores

Systematical Experimental Investigations Of Air-Water Interactions In Geysers
Yanqing Lu, Ling Zhou, David Ferras, Capucine Dupont, Qianuxun Chen and Saber Nasaoui

Framework For Planning Nature-Based Solutions To Meet Long-Term Catchment Scale Pluvial Flood Mitigation Targets
Wenhui Wu, Maziar Korzani, Lucy Marshall, Ana Deletic, Behzad Jamali and Kefeng Zhang

An Application Of Ai For Building Drainage Models For Urban Catchments
Siming Gong, James Ball and Holger Paxi Alvarez

A.2.4 Sediment Transport and Bathymetrical Changes Assessment

Vertical Sorting In Intense Transport Of Bimodal Contact Load: Measured Distributions In Collisional Layer And Effects On Bed Friction And Flow Condition
Vaclav Matousek, Jan Krupicka, Tomas Picek and Lukas Svoboda

Scour And Deposition Characteristics For Riverbed Morphodynamics In Response To Water Engineering
Yingliang Che and Peng Hu

Spatiotemporal Variations In Riverbed Stability In The Lower Jingjiang Reach Of The Yangtze River And Its Response To Flow And Sediment Characteristics
Jingyi Zhu, Wei Zhang and Jiangyu Wang

What Do Numerical Flow Predictions Above Flat And Degraded Beds Reveal About Scour Holes Observed In Quasi-Equilibrium Bed Of T-Shaped, Lab-Scale Confluence?
Tian Jin, Alemu Tezera Dessie, Emmanuel Mignot, Nicolas Riviere and Tom De Mulder

Observing And Analyzing The Riverbed Evolution Process In Relation To Different Floodplain Widths Through Flume Experiments
Chung-Yu Sun and Shaohua Marko Hsu

Hydrodynamics And Sediment Redistribution Around Individual Submerged Flexible Vegetation
Hariom Gautam, Anirban Mandal, Zulfequar Ahmad and Pramod Kumar Sharma

Geomorphic Evolution Of The Yellow River Channel-Delta System And Its Interaction Mechanism
Shasha Han, Lianjun Zhao, Baichuan Liu, Jingwen Wang, Guangming Tan, Jie Li and Ao Chang

Influence Of Water Content And Hydraulic Conditions On Fluvial Dike Breach Evolution And Patterns
Ricardo Jónatas, Sílvia Amaral, Francisco Gouveia, Rui Aleixo, Teresa Viseu and Rui Ferreira

Assessing The Effect Of A Morphological Acceleration Factor On 2D Morphodynamic Modeling In A Braided River
Behnam Balouchi and Ayda Mirzaahmadi

Numerical Investigation For Changing Processes Of Riverbed Variation And Surface Grain Size In A River Channel During A Large Flood
Takashi Wada, Yuki Kajikawa, Hiroshi Miwa, Ryutaro Yamada, Issa Iwada and Mina Hiraiwa

A Model For Equilibrium Contraction Scour Depth At Bridges On Catchment Scale
Fainaz Inamdeen, Magnus Larson, Björn Almström and Rajib Das

Evolutionary Pattern Of The Main Trough Of The Lower Yellow River After The Operation Of Xiaolangdi Reservoir
Yuhang Dong, Dangwei Wang, Chenge An, Jianguo Chen, Zuwen Ji, Yao Tang and Zijing Zhou

Assessing The Impacts Of Climate Change On Reservoir Sedimentation Dynamics In The Niger River Basin: Insights From Northern Benin
Djigbo Félicien Badou and Audrey Merveille Adango

Dynamics Of Estuarine Circulation And Morphological Alterations: A Case Study Of The Vietnamese Mekong Delta
Menna Ahmed, Sameh Kantoush, Tetsuya Sumi, Doan Binh, Nguyen Mai, Binh Nguyen, Nguyen Doan, Luc Tuan, Nguyen Vuong, Huong Vu, Le Quyen and Ha Thang

Settling Behavior Of Microplastic Particles In Grid-Generated Turbulence: A Comparative Study Of Fibers And Spheres
Siamak Seyfi, Shooka Karimpour and Ram Balachandar

Assessing Eroded And Deposited Sediment Volumes After An Extreme Flooding Event
Tamara Kuzmanić, Matjaž Mikoš, Nejc Bezak, Klaudija Lebar, Mateja Klun and Simon Rusjan

A Unified Modeling Framework For Bedload And Suspended Transport In Two-Dimensions
Kim-Jehanne Lupinski, Pablo Tassi, Florian Cordier, Magali Jodeau, Nicolas Claude and Alessandra Crosato

Modeling Laboratory-Scale Unsteady Flow Hydrographs: Bed Shear Stress And Sediment Transport On Rough Surfaces
Florent Grattepanche, Guillaume Gomit, Damien Calluaud, Dominique Courret and Pierre Sagnes

Stabilization Of Sediment Deficit Bays: An Example From Unawatuna Bay, Sri Lanka
Sanjeewa Wickramaratne and Imalka Abeygoonasekara

Unlocking Climate Change Consequences: Insights From Decades Of Sediment Data In A Partially Glacier-Fed River System
Sabrina Schwarz, Dorian Shire-Peterlechner, Andrea Lammer, Helmut Habersack and Rolf Rindler

Experimental Study On The Influence Of Cohesive Sediment On Sediment Transport Capacity In The Middle Reaches Of The Yellow River
Qing Feng, Qianlu Xiao and Yanshuang Zheng

Development Of Scour Prediction Equations For Bouldery Strata: An Analytical And Experimental Study
Abhi Sangra, Manish Mall, K S Hariprasad and C S P Ojha

One-Dimensional Physically-Based Model Of Dam And Levee Breaching Due To Overtopping Flow
Weiming Wu and Meng Wang

Numerical Study Of Sediment Budget In The Noakhali Islands Area Of The Meghna Estuary
Rahman Md Shahinur, Daisuke Harada and Shinji Egashira

Long-Term Shoaling Reduction Alternatives To Improve Maintenance Dredging Efficiencies In Navigation Channels
Michael B Kabiling

The Estimation Of A Diffusion Coefficient In Transcritical Open Channel Aggradation
Filomena Maietta, Michele Iervolino, Hasan Eslami and Alessio Radice

Experimental Study On Bedload Transport Measurement Using ADCP
Lu Wang, Zihan Wang, Xudong Ma, Xingnian Liu and Ruihua Nie

Unresolved CFD – Dem Simulation Of Embankment Failure Due To Overtopping And Seepage Flow
Daisuke Kobayashi and Kazuyuki Ota

Assessment Of The Impact Factor On The Coastal Morphology Of Taitung, Taiwan, By Using The Eof Method
Wei-Po Huang, Jui-Chan Hsu and Chun-Jhen Ye

Numerical Study On Spatio-Temporal Dynamics Of Sediment Flux And Its Sensitivity To Sediment Supply In Gravel-Bed River
Karimullah Sefat and Ryota Tsubaki

A Data-Driven Approach To Real-Time Reconstruction Of Turbulent Flow Fields On Coarse-Grain Bed Using Sparse Observational Boundary Data
Yifan Yang

Sand–Gravel Mining Impacts On Sediment Transport And Morphology Of Thoubal River
Mukesh Kumar Yadav, Romeji Ngangbam and Victoria Ningthoujam

Experimental Study Of Dam-Break Induced Local Scour Around Walls
Seyed Abbas Jazaeri, Ioan Nistor, Abdolmajid Mohammadian and Xin Liu

Modelling Sediment Deposition In Reservoir Using Complex Model Chain And Limited Data – Focus On 1D Numerical Modelling
Slaven Conevski, Massimo Guerrero, Rezar Lleshi, Nils Rüther, Tor Haakon Bakken, Agim Lazareni and Siri Stokseth

Influence Of Seepage-Integrated Flow Models In Predicting Overtopping Erosion Of Small Levee
Yuki Nakata, Yuki Kajikawa and Masamitsu Kuroiwa

Evaluation Of Relative Mobility Of Exposed Particles Using Conditional Averaging Of Turbulent Peak Flow Events
Hridaya Bastola and Panayiotis Diplas

Pattern Analysis Of Suspended-To-Total Sediment Load Fraction Using UMAP
Hyoseob Noh, Yong Sung Park and Il Won Seo

Analyzing The Interaction Between Riparian Vegetation And River Morphodynamics From Hydraulic Experiments Based On Remote Sensing
Eunkyung Jang, Woochul Kang and Un Ji

A.2.5 Forecasting and Warning

An Efficient Early Warning System Of Tropical Cyclone-Induced Impacts For Small Pacific Island Countries
Fernando Méndez, Laura Cagigal, Sonia Castanedo and Beatriz Pérez Díaz

Runoff Forecast In Jialing River Basin Considering Climate Change And Landuse Change
Chunxiu Pu, Hao Yuan, Kaihua Guo and Yunfei Mao

Development Of A Hysteretic Diagnostics For Classifying Sequential Development Of Flood Wave Types In A Single Flood Event
Kyeongdong Kim, Dongsu Kim and Ikhan Lee

A Study On Generalization Of Dam Inflow Prediction By Machine-Learning Based Method For Entire Japan
Takuma Suzuki, Makoto Nakatsugawa and Yosuke Kobayashi

A Novel Discrete Boltzmann Model For Shallow Water Flows With Wet And Dry Scheme
Yong Peng, Ting Zhang, Xuan Gao, Ping Wang and Lijuan Liu

Influence Parameter Identification And Forecast In Ice Condition Of Yellow River
Tao Wang, Xinlei Guo and Hui Fu

Study Of Rainfall-Melting Snow Runoff Forecasting Throughout The Year Using Open Data Available In Japan
Yoko Hirasawa, Makoto Nakatsugawa and Tomohide Usutani

Advanced Reservoir Inflow Forecasting Model Using Integrated Multi-Source Ensemble Precipitation Data
Anant Patel and Dr.Sanjaykumar Yadav

Advances In Flash Flood Forecasting For Urban And Semi-Arid Regions: A Case Study From Saudi Arabia
Fawaz Alzabari, Giulia Sofia, Emmanouil Anagnostou, Xinyi Shen, Qing Yang and Syed Zaidi

Comprehensive Prediction Of Water Intake Impact From Hazardous Substances Discharged Into The Yodo River During A Tsunami
Haodong Bai and Nozomu Yoneyama

Refraction Behavior Analysis Of Tsunamis Originating From The Northern Offshore Region Of Noto Peninsula, Japan
Konosuke Nagao and Nozomu Yoneyama

Atmospheric Conditions During Compound Wind And Precipitation Extreme Events In Metro Manila; Linkages And Predictions
Diah Valentina Lestari, Wei Jian and Edmond Yat-Man Lo

Flood Forecasting Using Process- And Data-Driven Approaches
Agnieszka Indiana Olbert, Sogol Moradian, Michael Puchley and Thomas K.J. McDermott

Study On Runoff Simulation With Multi-Source Precipitation Information Fusion Based On Multi-Model Ensemble
Runxi Li, Chengshuai Liu and Caihong Hu

Methodology For Evaluating Vulnerability To Climate Change. Application Case In Mexico
Sandra Lizeth Rodiguez-Heredia, Liliana García-Romero and Sonia Tatiana Sánchez-Quispe
Hydrologic And Hydrodynamic Characterization Of Debris Flow In The Páez River Considering Glacier Volumes Estimated Using Remote Sensing Of Volcano Nevado Del Huila
Oscar Felipe Agredo Campuzano

Connecting The Level Of Detail In Spatial Discretization Of A Watershed With Peak Flow Predictions In A Distributed Model
Simon Martinez Rendon, Nicolas Velasquez Giron and Witold Krajewski

2D Modeling On River Flow Characteristics Due To Extreme Rainfall
I Gede Tunas and Sukandi Samatan

Rainfall And Runoff Characteristics In The Kumano River Basin Using Different Resolution Global Warming Prediction
Hisanori Kusuhara, Kohji Tanaka and Ryoukei Azuma

Forecasting Soil Moisture Drought Using Neural Ordinary Differential Equation: A Case Study Of Texas, U.S.A
Jeongwoo Han and Tae-Woong Kim

Method For Flood Risk Prediction In A Tropical Basin
Adriana Márquez-Romance, Mairim Márquez-Romance, Bettys Farias-De Márquez, Edilberto Guevara-Pérez, Sergio Pérez-Pacheco and Eduardo Buroz-Castillo

Identification Of Non-Structural Measures For Urban Flooding Under Climatic Uncertainty
Carmelo Raspanti and Gabriele Freni

Probabilistic Decision Support For Anticipatory Flood Actions In Alexandria City, Egypt
Adele Young, Biswa Bhattacharya, Emma Daniels and Chris Zevenbergen

Research On Estimating Snow Distribution Using AI Technology
Shoichi Kurosawa and So Kazama

Towards Local Flood Warning Systems, Deploying High Resolution Sensing To Provide Situational Awareness During And After Floods: A Uk Trial
Chris Sweetapple, Anna Hastings and Peter Melville-Shreeve
A Case Study Of A Hybrid LSTM Network To Enhance Real-Time Flood Forecasts In Alpine Catchments
Manuel Pirker, Sebastian Gegenleithner, Clemens Dorfmann and Josef Schneider

A Study On Rapid Calibration Of Subaqueous Riverbed Topography Using Pre-Flood Remote Sensing Images And Predicting The Impacts Of Subsequent Dam-Break Floods: A Case Study Of The Kakhovka Dam Collapse
Xiaolong Zhang, Faxing Zhang and Liyuan Zhang

A Coupled GPU-Accelerated And LTS-Based Hydrodynamic Model For Urban Flood And Drainage Network Simulation
Yexuan Sun and Peng Hu

Intelligent Flood Risk Management For Jeju Island: Grid-Based Ai Prediction And Risk Assessment
Hyeon-Tae Moon, Kyung-Tak Kim, Youn-Seok Choi and Gil-Ho Kim

Operational Flood Forecasting Using Integrated NWP–Hydrological Distributed Models And Deep Learning: Projections Of Flews Manipur
Romeji Ngangbam, Khelchandra Thongam, Saroja Potsangbam, Dinesh Chanam and Tomba Khumukcham Singh

A.2.6 Disaster Risk Reduction

Assessing The Effectiveness Of Green And Grey Solutions For Flood Risk Reduction: A Comparison Of Damage-Based And Score-Based Approaches
Damien Sansen, Daniela Rodriguez Castro, Pierre Archambeau, Michel Pirotton, Sébastien Erpicum and Benjamin Dewals

Multi-Driver Approach To Modeling Compound Flood Hazards (Case Study Of Pekalongan City, Indonesia)
Annisak Laila Rakhmawati

Risk Assessment Of Rainfall-Induced Landslides By Slope Unit-Based Data Augmentation
Jie Liu and Yuji Sugihara

Optimising Urban Flood Evacuation Routes With Metaheuristic Algorithms: A Case Study Of York, Uk
Chuannan Li, Changbo Jiang, Man Yue Lam and Reza Ahmadian

A Comprehensive Design Framework For Placement Of Urban Flood Prevention Measures For Critical Area
Ruixuan Wu, Reza Ahamadian and Changbo Jiang

Using Comprehensive Field Data For Validating Large-Scale Hydrodynamic Hindcasting Of An Extreme Flood Event
Pratik Chakraborty, Christophe Dessers, Pierre Archambeau, Michel Pirotton, Sébastien Erpicum and Benjamin Dewals

Estimation Of Pluvial Flooding Risk In The City Of General Rodriguez, Buenos Aires, Argentina
Sandra Liliana Sandra Flores, Eduardo Franco Salto and Federico Martín Rodríguez

Floods In Cities: New Insights For Integrating Pluvial Flooding Into Flood Risk Management Plans
Giuseppe Tito Aronica, Gianfranco Becciu, Giuseppina Brigandi, Luca Cozzolino, Giuseppe Del Giudice, Renata Della Morte, Corrado Gisonni, Francesco Napolitano, Roberta Padulano, Stefano Pagliara, Elena Ridolfi, Umberto Sanfilippo and Giada Varra

Risk Balance Operation Model For Reservoir Groups Based On Ensemble Forecasts
Han Wang and Jiaming Liu

Numerical Simulations Of Partially Submerged Farm Animals Exposed To Floodwaters
Tommaso Lazzarin and Andrea Defina

Resistance Of A Gabion Against Overflow Based On A Full-Scale Experiment Of River Levee
Kengo Hori, Hiroshi Kokuryo and Yasuo Nihei

A Study On The Performance Evaluation Of Rainfall-Runoff Reduction Facilities In Urban Watersheds
Minjeong Kim and Inhwan Park

Research On The Flood Characteristics Of Three-Dimensional Bearing Bodies Based On Computational Fluid Dynamics
Cai Zhao, Liu Hong-Wei and Chu Shaozhi

Numerical Simulation Study On Seismic Isolation And Reduction Of Underground Structures
Yonglai Zheng and Haorui Chen

Study On The Effects Of Different Drainage Measures For Construction Projects Under Extreme Rainstorm And External Flood Conditions
Hongwei Liu, Shaozhi Chu, Cai Zhao and Xing Min

A Review About Flood Preparedness Of Healthcare Facilities
Yared A. Abebe, Maria Pregnolato and Bas N. Jonkman

Comparative Study Of Various Typical Hydrological Models For Flash Flood Forecasting
Kejia Wen, Chengshuai Liu and Caihong Hu

Study On The Effect And Influencing Factors Of Leaching Desalination Method
Wang Penghe and Wu Weiwei

Remote Sensing Dynamic Monitoring And Impact Assessment Of Dongdian Flood Detention Area Based On Multi-Source Satellite Imagery And Low-Altitude Manned Aerial Data
Hongjie Liu, Wenlong Song, Yizhu Lu, Juan Lv, Rongjie Gui, Long Chen, Yingwei Sun Sun, Jianwei Ma Ma and Yayong Sun Sun

Flood Risk Evolution In The Yangtze River Delta: The Perspective Of River Network Structure And Connectivity
Peng Wang, Shanheng Huang, Yueyang Dong, Zulin Hua, Gang Chen, Tianshu Zhang and Jingyi Shi

Proposal For The Evacuation Difficulty Map During Inundation
Ryuichi Hirakawa, Honoka Aita, Tomokazu Negishi and Yuya Hoshino

Multivariate Analysis Of Compound Flooding In Can Tho City, Vietnam
Jinghua Jiang and Qiuhua Liang

Runoff Forecasting Based On Rainfall Distribution Information And The Relation Between Forecast Accuracy And Watershed Characteristics
Go Ohno, Takahiro Sayama and Yukinobu Oda

Assessing The Risk Of Sequential Dam Breaks: A Case Study Of Tuirial Dam
Dhyan Singh Arya, Shivendra Jaiswal, Ranendra Sarma and Debajit Das

Long-Term And Short-Term Disposal Of Landslide Dams At Steep V-Shaped Valleys
Jingwen Wang, Lianjun Zhao, Shasha Han, Rui Wang and Guangming Tan

Experiment Study On Dike Breaching With Top Structures
Wei Huang, Yufang Ni, Wengang Duan and Duan Chen

Study On Deformation And Control Of Surrounding Rock In Inclined Coal Seam Roadways Under Seepage Effects
Tianwen Li and Yonglai Zheng

Development Of Building Fragility Curves For Flooding In The July 2020 Kuma River Flood, Japan
Riku Kubota, Jin Kashiwada, Yoshiaki Hisada, Ayaka Katano, Mamoru Tanaka and Nihei Yasuo

People-Oriented Assessment Framework Of Compound Urban Flooding Risks In The Context Of Climate Change: A Case Study Of Hong Kong
Zhi-Yong Long, Yuan-Yuan Jia and Huan-Feng Duan

Development Of Evaluation Model For Driftwoods Generation In The Kawabe River Basin Due To Heavy Rain Event And Assessment Of The Effect Of The Climate Change
Shinichiro Yano, Haruka Imai, Yasuyuki Maruya and Satoshi Watanabe

Aseismic Mechanism Of Laminated Shear Energy Dissipation Structure In Hydraulic Tunnels During An Earthquake
Ningbo Li, Xuepeng Zhang, Xingda Wang and Yujing Jiang

Risk Assessment Of Flash Flood Disasters Using A Coupled Random Forest-Feature Selection Algorithm
Xiaolei Zhang, Ruihua Qin, Ronghua Liu and Rong Zhou

Experimental Study On Hydraulic Characteristics Of Dam-Break Floods Encountering Earthquake-Damaged Arch Dam
Liyuan Zhang and Faxing Zhang

3D Numerical Assessment Of Water-Induced Forces On People During The Evacuation Of Flooded Stairs
Carlos Humberto Aparicio Uribe, Beniamino Russo and Jackson David Tellez Alvarez

Integration Of Stability Functions Into Transport Flood Risk Modelling Framework
Lea Dasallas, Barry Evans, Dion Todd, Hamish Kampman, Markus Pahlow and Thomas Cochrane

Recorded Tsunami Evacuation Behaviour In Zushi City, Japan
Joseph Kim and Ioan Nistor

Risk Assessment Of Road Hazards Caused By Mountain Floods In The Upper And Middle Reaches Of The Yarlung Tsangpo River Under Different Return Periods
Zhang Xiaoyue, Liu Tianxue, Xue Yuan, Wang Jiamei and Fu Xudong

Evaluating The Effectiveness Of Combined Flood Control Measures In The Karube River Basin: A Focus On Paddy Field Dams And Pre-Drainage Strategies
Takuno Tomoki, Akoh Ryosuke and Maeno Shiro

Building Flood Resilience: Remote Sensing And Structural Analysis For Malawi's Informal Settlements
Luke Moss, Innocent Kafodya, Lu Zhuo and Viviana Novelli

Enhancing Flood Early Warning Dissemination And Evacuation Response Through Agent-Based Modelling
Nasrul Ghazali, Xilin Xia and Nigel Wright

Modeling Of Urban Flooding Using Satellite And Ground-Based Data: A Case Study Of Kathmandu Valley
Ramesh Kumar Maskey, Udhyan Shah, Arya Dhakal, Santosh Chaudhary, Alison Shilpakar, Sujan Tyata, Kushal Kc and Abash Maskey

A.2.7 Other Related Topics

Yifei Cheng, Junqiang Xia, Meirong Zhou and Cuixia Chen

Characteristics of Shallow Mixing Layer in an Open-Channel Confluence
S. Samuel Li

Computation of Bed Shear Stress Using Multiple Methods and Quadrant Analysis in an Asymmetric Sinuous Channel
Gurugubelli Yatirajulu, Laxman V Rathod, P V Timbadiya and Bandita Barman

Depth-Averaged Turbulence Modelling Controls on Fine Sediment Deposition in Compound Channel
David F. Vetsch, Daniel Conde and Davide Vanzo

Development of a Parameterization Tool to Create Generic Rivers for Hydraulic Simulations of Run-of-River Pumped Storage Hydropower
Kanchan Shrestha, Anders G. Andersson and J. Gunnar I. Hellström

Dynamics of Large Wood Transport near the Confluence
Yuchen Zheng, Jiawei Lin and Saiyu Yuan

Evaluation of Existing Methods to Predict Flow Resistance due to Stream Meandering
Cristopher Alexander Gamboa Monge and Ana Maria Ferreira Da Silva

Experimental Quantification of Hydrodynamic Effects on the Root Development of Plant Cutting
Yahel Eliyahu-Yakir, Anders Kaestner, Andrea Carminati, Massimiliano Schwarz, Giovanni De Cesare and Paolo Perona

Hydraulic Modeling and Sediment Transport for Flood Mitigation: Insights from Geremeas Basin (IT)
Veronica Manconi, Soroen Tjerry, Paolo Orrù, Valentino Demurtas, Giacomo Deiana, Costantino Azzena, Giovanni Luise, Luigi Mancosu and Andrea Sulis

Hydro-Morphodynamic Characteristics of a Mining Pit near a Channel Confluence
Ravi Kumar Mishra, Bandita Barman and Tinesh Pathania

Impacts of Xiangjiaba Reservoir Outflow of the Navigation Benefit of Upper Yangtze River
Shiyu Zhang, Hui Cao, Yufeng Ren, Ziqiang Zeng, Yiming Ma and Lu Wang

Meandering Development Processes of the River with Floodplain Vegetation Experimentally
Chang-Lae Jang

Modelling Flood and Large Wood: a Dynamic Duo in Motion
Wafae Ennouini, Elisabetta Persi, Diego Ravazzolo, Gabriella Petaccia, Stefano Sibilla, Borbàla Hortobàgyi and Hervé Piégay

Modelling of Phosphorus Transport in Rivers with Cascade Low-Head Movable Weirs
Yufang Ni, Wei Huang and Duan Chen

Numerical Modeling of the Vegetation Effects in Rivers
Ricardo Gutiérrez, Alejandro Mendoza, Moisés Berezowsky and Maritza Arganis

Optimizing Morphological Design for Ecological Restoration and Flood Resilience: a Case Study of the Gérine River, Switzerland
Azin Amini, Jean-Marc Ribi and Giovanni De Cesare

Research on Model Tests and Numerical Simulations of the Hydraulic Characteristics of Curved Spillways
Fei Liu, Leilei Gu and Chunjing Liu

Returning Floodplain Value: Ecological Modelling Informing Decision Making in the Victoria MDB
Andrew Little, Ben Gawne and Ross Hardie

Sand Supply to Gravel Bed and its Effect to Gravel Mobilization and Channel Evolution
Hiroshi Miwa, Takashi Wada, Yuki Kajikawa, Sota Amahata and Shuhei Kubo

Spatio-Temporal Variation of the Morphologically Active River Corridor in Long-Duration Flume Experiments
Niklas Henning, Ingo Schnauder, Stefan Haun and Silke Wieprecht

3D Numerical Modelling of Flow Overtopping Induced of Fluvial Dikes
Shiqin Zhou, Xuefang Li, Vincent Schmitz, Vasileios Kitsikoudis, Shuyue Yu, Sebastian Erpicum and Benjamin Dewals

A.3.3 Reservoirs Management

A New Optimization Model of Reservoir Operation Considering Ensemble Streamflow Forecast Uncertainty: Integration of Robust Optimization Concept and Karhunen-Loeve Expansion Method
Duan Chen and Xinlong Deng

Application of AI-Based Prediction Model for the Annual Floating Debris in the Reservoir
Seongwook Choi and Hyeongsik Kang

Evaluating Outflow Discharge from Flood Control Reservoirs: a Comparison of the Chicago Storm-Based Method and the Variational Approach
Dina Pirone, Luigi Cimorelli, Andrea D'aniello, Daniele Martino and Domenico Pianese

Integrated Decision Support System for Large-Scale Cascade Reservoirs Utilizing Rolling Prediction and Adaptive Optimization
Wang Peng, Huaming Yao, Zhiqiang Jiang, Hui Cao and Tao Wang

Investigation of Performance of a Patented Coanda Type Water Intake for Water Capture and Sediment Release Efficiencies
Oguz Hazar, Sercan Civelek, Cem Ali Sagir and Sebnem Elçi

Reduction of Green Algae through Dam Upstream Old Embankment and Inland Maintenance
Minjae Jung, Joobum Park and Suneung Kim

Research on Hydraulic Characteristics of Transition Structure from Pressurized to Non- Pressurized Spillway Tunnel with High Speed
Yi Diao and Zhong Tian

Reservoir Sedimentation Challenges and Issues with Case Study
Hl Tiwari
And Kartikeya Mishra

Sediment Venting through Power Waterways: a Field Monitoring Concept
Carolin Friz, Frederic M Evers, David Felix and Robert M Boes

Study on an Inflow Flood Identification Model of Reservoir Group
Jing Huang, Yehongping Qin, Zejun Li, Chao Tan, Jiqing Li and Ningning Li

Study on Surveying Dam Sediment Topography Using A UAV-Mounted Green Laser and on Dam Sediment Flushing Analysis
Kota Shimizu, Shun Saito and Takehiro Oki

Study on the Calculation Method of Dam Failure Probability of Cascade Reservoirs under Risk Correlation
Te Wang, Zongkun Li, Wei Ge, Jun Zhao and Liwei Han

Two-Dimensional Hydrodynamic Analysis and Field Measurements for the Assessment of Eutrophication in the Peñitas Reservoir, Mexico
Fabian Rivera-Trejo, Gaston Priego-Hernandez, Marcela Severiano-Covarrubias, Alejandro Mendoza-Resendiz and Gabriel Soto-Cortes

Water-Sediment Regulation System Coupling Cascade Reservoirs and River Reaches of the Middle and Lower Yellow River
Junqiang Xia, Xianziyi Zhang and Yifei Cheng

A.3.4 Urban Hydraulics

A Case Study on Integrating and Repurposing an Existing Public Irrigation Channel into a Water Feature in a Private Residential Development
Jonah Marie Malolos, Jose Carlo Eric Santos, Aragorn Inocencio, Timothy Ferrari, Charmaine Mabulay and Carissa Marie Soria

Analysis of Pedestrians Safety in Subway Station Platform by Inundated Flow
Minjae Kim and Inhwan Park

Application of Smoothed Particle Hydrodynamics for Simulation of Rainfall Runoff in Urban Terrain
Akihiko Nakayama and Xin Yan Lye

CFD Modelling Study of Air-Water Stratified Flow in the Partially Filled Underground Gravity Main
Janek Laanearu

Cost, Time and Environmental Benefits of Channel Lining with Geocells
Wladimir Caressato Junior and Gustavo Fierro

Dynamic Energy Dissipation Characteristics of Plunging and Vortex Dropshafts in Deep Tunnel Systems
Yiran Wang and Xiaodong Yu

Dynamics of Gas Phase Hydrogen Sulfide Distribution in a Prototype Sanitary Sewer Network
Jinlong Zuo, Yu Qian and David Zhu

Effect of Speed Bumps on Hydraulics Efficiency of Grate Inlet
Jackson Tellez-Alvarez and Beniamino Russo

Experimental Investigation of Acoustic Wave Propagation in Fully Developed Turbulent Pipe Flow
Xin Meng, Yiran Cui and Mohamed Salah Ghidaoui

Experimental Investigation of Fluvial Urban Flood Flow Dynamics
R. Reshma and Soumendra Nath Kuiry

Experimental Study on Dynamic Characteristics of Entrapped Air in Urban Drainage System
Ruilin Feng, Elias Tasca, Mike Van Meerkerk, Mohsen Besharat, Ling Zhou and Helena M. Ramos

Field Investigation of the Flow Field in Box Culverts – Preparation and Challenges
Hui Ling Wong and Hubert Chanson

Hydraulic Performance and Flow Characteristics of Adjustable Tilting Weir
Jiazhen Li, Bowen Chen and Tao Wang

Improvement of Water Supply System Infrastructure in Ende: Challenges and Solutions
Yohanes Erik Kurniawan Nggae, Intan Supraba, Radianta Triatmadja and Chen-Yi Sun

Inflow and Infiltration Assessment of a Prototype Sanitary Sewer Network
Licheng Ye, Yu Qian and David Zhu

Preliminary Findings on PRV Anomalies in a Real District Metered Area
Caterina Capponi, Luciano Veritti, Lorenzo Tirello, Andrea nRubin, Sara Prapotnich, Bruno Brunone and Silvia Meniocni

Towards Efficient Building Representation in 2D-Hydrodynamic Modeling
Leon Frederik De Vos, Karan Mahajan, Daniel Caviedes-Voullième and Nils Rüther

A.3.5 Eco- and Environmental Hydraulics

Advancing Environmental Risk Mitigation: LES-Based Analysis of Dense Jet Discharges in Flowing Currents for Improved Mixing Behavior Predictions
Mostafa Taherian and Abdolmajid Mohammadian

A Hydrodynamic Analysis of a Chinese Mitten Crab Trap Using 3D Modeling
Sengdavanh Thepphachanh and Torsten Heyer

Alternative Downstream Passage Incorporating Swirling Flows
Reilly Cox, Jasmin Martino and Stefan Felder

A Method for Assessing Eutrophication Risk of Lakes Considering Joint Effects of Water Quality and Water Quantity and its Application in Caohai Lake, China
Wei Huang, Chenguang Xiang, Zhuowei Wang and Huaidong Zhou

An Experimental Study on Local Sediment Erosion and Deposition Patterns around Instream Boulders
Mohammad Rahman, Abul Baki, Haitham Ghamry and Chris Katopodis

Assessing Hydropeaking Mitigation Measures Using Casimir Model: Effects for Fish Habitat
Nusrat Jahan Bipa, Giuseppe Roberto Pisaturo, Ianina Kopecki, Matthias Schneider and Markus Noack

Assessing the Resilience of Mangrove Wetland to Climate Change Using a Modelling Approach
Eliana Jorquera, Patricia Saco, Juan Quijano Baron, Angelo Breda, Steven G. Sandi and Jose Rodriguez

Detachment of Plastic Particles from Air-Water Interfaces
Felipe Condo-Colcha, Robert K Niven and Matthias Kramer

Ecological Effect Evaluation of Comprehensive Management Projects in the Taihu Basin
Shi Feng, Yijun Guo and Wenjing Lu

Effect of the Jinsha River Hydropower Development on Coreius Guichenoti Long-Term Population Viability
Rui Han, Hongyi Yang and Li Zeng

Effects of a Collinear Current on Wave Damping by Seagrass Meadows
Davide Vettori, Giordana Francesco and Costantino Manes

Effect of Brush Block on the Movement Characteristics of Squalius Orpheus in a Pool-Weir Fish Pass: Ethohydraulic Experiments
Mehmet Salih Turker, Cumhur Ozbey, Serhat Kucukali, Ceren Şengül and Baran Yoğutçuoğlu

Effects of Penetrative Convection on the Dynamics of Gravity Currents in Lakes
Panagiotis Prinos and Vassilios Papaioannou

Ethohydraulic Experiments on Downstream Fish Migration with Oppermann Fine Screen
Cumhur Özbey, Mehmet Salih Türker, Serhat Küçükali, Ceren Şengül, Baran Yoğurtçuoğlu and Ahmet Alp

Evaluation of the Impact of Climate Change on the Performance of the Cabanillas River Hydraulic System in the Peruvian Highlands
Isidro Pilares, Wilber Laqui, Carlos Pilares and Percy Ginez

Experimental Investigation into the Settling of Single and Multiple Microplastic Particles in Quiescent Water
Camillo De Castro, Siamak Seyfi, Wim S. J. Uijttewaal and Shooka Karimpour

Experimental Study on the Spatial Traits of Sedimentation Driven by Discontinuous Nearshore Vegetation Patches
Liu Yang and Zhonghua Yang

Exploring the Effects of Different Input Parameters in Friction Vegetation Laws
Gabriele Farina, Vito Bacchi and Marco Pilotti

Fish Passage on Sloped Weirs - Assessment of a Simple Solution to Aid Multiple Species
Daniella Montali-Ashworth, Andrew Vowles and Paul Kemp

High-Resolution Numerical Modelling of Sediment Dynamics in Submerged Canopies
Shahabaddin Abbaszadeh, Julia Mullarney and Ali Shokri

Hydraulic Analysis of an Artificially Generated Guiding Stream for Improved Downstream Fish Passage at a Hydropower Dam
Anders G. Andersson, Eric Lillberg, Robin L. Andersson and J. Gunnar I. Hellström

Hydraulic Performance of a Fishway under Different Turbine Operations: a Case Study from Switzerland
Ismail Albayrak, Mohammadreza Maddahi, Maximilian Kastinger, Alfredo Scherngell, Roland Sutter and Robert M. Boes

Hydrodynamic Characteristics of Compound Channel During Flood Inundation and Recession Processes: a Combined 2D/3D Numerical Study
Jiaming Liu, Yang Xiao, Saiyu Yuan and Carlo Gualtieri

Hydrodynamic Pressure Distribution on a Rough-Bed River Using CFD and High-Resolution Topography
Tais Yamasaki, Rebecca Hodge, Richard Hardy, Robert Houseago, Joel Johnson, Rob Ferguson, Elowyn Yager, Trevor Hoey, Stephen Rice and Christopher Hackney

Importance of Pool Area and Frequency for Aquatic Habitat in Streams
Rohan Benjankar and Daniele Tonina

Influence of Bragg Resonance on Wave Reflection in Artificial Oyster Reefs
Abbasali Rahmani Khajouei, Lei Wang, Alessandro Stocchino and Huan-Feng Duan

Influence of Pumped Hydropower Storage Operations on Reservoir Ecosystems: a Numerical Study on Thermal Stratification
Melina Sattelmeier, Anders G. Andersson, J. Gunnar I. Hellström and T. Staffan Lundström

Investigation of Colliding Gravity Currents of Different Volumes
Angelos Kokkinos and Panagiotis Prinos

Investigation of Hydraulic Performance of Fish Passage in Run-Of-River Hydropower Projects in Nepal: a Case Study of the Jhimruk Hydropower Project
Dikshya Khadka, Sunit Palikhe, Umesh Singh, Pawan Kumar Bhattarai and Meg Bahadur Bishwakarma

Impact of Vortex Structures on Fish Hydrodynamics and Fluid Environment Response Analysis
Yiyun Peng, Min Chen, Ruidong An and Jia Li

Laboratory Experiments and Numerical Simulation of Ice Melting in Water Current
Chia-Ren Chu, Cheng-Han Yu and Hwa Chien

LES of High Rayleigh Natural Convection Induced by Surface Cooling
Angelos Kokkinos and Panagiotis Prinos

Lessons from the Field: Fish Can Go with the Pipe Flow
Hiruni Kammanankada, Jasmin Martino and Stefan Felder

Monitoring Plastic Using Deep Learning Model in a Controlled Laboratory Environment
Ana Todorova, Robert Niven and Matthias Kramer

Numerical Modelling for Evaluation of Entrainment Probability at a Coastal Power Plant Intake under Storm Tide
Haiwen Zhang, Li Zeng, Yijun Zhao and Xiaoli Chen

Numerical Experiments on the Effects of Coastline Alteration on Circulation Patterns in Hakata Bay
Akihiro Hashimoto

Open-Channel Confluence as an Oblique, Curved, Confined Jet in a Crossflow
Yunqiang Zhu, Saiyu Yuan, Hongwu Tang, Alexander Sukhodolov and Vladimir Nikora

Prediction of Climate Change Impact on River Temperature in the First Class Rivers of Chugoku Region Using Deep Learning
Daichi Fukumaru and Yoshihisa Akamatsu

Relationship Between the Form of Channelized Streams and Community Dynamics of Fish and Benthic Invertebrates due to Flood Disturbance
Koji Hijikata, Morihiro Harada and Kohei Uemura

Response Patterns of Hyporheic Exchange Flux and Extent of a River to Tidal Action and Seasonal Change of Hydrological Conditions
Jingwen Xing, Yi Cai and Nianqing Zhou

River Architecture Shapes Fish Migration Paths through their Multiscale Perception and Memory of Recent Past Hydrodynamic Experiences
R. Andrew Goodwin

Sediment Transport in Vegetated Channel
Jennifer Duan and Khalid Al

Simulation of Supersaturated Total Dissolved Gas Transport in Compound Vegetated Channel
Youquan Yuan, Jingjie Feng, Ran Li and Chonglin Wang

Study on the Impact of Entrainment Effects at River Intakes on Early Fish Resources
Zhonghang Wu, Ran Li, Jingjie Feng, Xiaolong Cheng and Kefeng Li

The Blocking Effect of Parallel Fringing Vegetation Arrays on Flow Structure Dynamics
Yuan-Heng Zhang and Huan-Feng Duan

The Effects of Vegetation Height and Density on Flow and Turbulence within and behind a Patch of Vegetation
Masaya Yoshikai, Julia Mullarney, Vinay Nelli, Rémi Chassagne, William Nardin and Rafael Tinoco

The Impact of River Sand Mining on Mixing Layers in a Squeezed Mangrove Forest in the Mekong Delta, a Schematized Model Approach
S.H Truong, L.K Phan and Marcel Stive

The Influence of Patchy Vegetation on Tidal Flows: Field Dye Measurements of Intra- and Inter-Patch Processes
Julia Mullarney, Vinay Nelli, Remi Chassagne and Masaya Yoshikai

The Hydraulics, Hydrodynamic Instability and Mixing of Two-Layer Flows
Gregory Lawrence

The Physical Environment and the Behavior of Crustacean Larval under Flood Condition in the Kitagawa River Estuary, Japan
Akira Tai, Hiroki Iyooka and Tomonori Saita

Three-Dimensional Hydrodynamic Simulations Indicate Instantaneous Pathways for Fish Passage
Federica Scolari, Sebastian Schwindt, Stefan Haun and Silke Wieprecht

Time-Varying Effects of Water Diversion from River to Lake on Lacustrine Phytoplankton Communities
Jiangyu Dai

Total Phosphorus Dynamics in a Large Intermittent River System in Brazil
Iran Eduardo Lima Neto

Transverse Ribs and Gigantic Rocks Distribution in Alluvial Fan Rivers and Influence of Geological and Anthropogenic Impacts
Kazuki Karasawa, Kazuaki Ohtsuki, Rei Itsukushima and Tatsuro Sato

Turbulence Characteristics in Low Velocity Zones for Upstream Fish Passage – Comparison between Physical Modelling and CFD Modelling
Hui Ling Wong and Hubert Chanson

Vertical Profiles of Velocity and Turbulent Kinetic Energy at Vertical Slot Fish Pass
Nika Jahangiri, Cumhur Ozbey and Serhat Kucukali

Water Availability in the Huancané River Basin, under Climatic Influence, with the Application of the Soil & Water Assessment Tool Model
Joaquin Vincent Calderon, Isidro A. Pilares-Hualpa, Carlos Pilares, Percy A. Ginez-Choque, Roberto Alfaro-Alejo and Wilber Laqui

Water Temperature and Dissolved Oxygen Vertical Profiles and Seasonal Variations in a Mountain Stream Pool: a Field Study
Serhat Kucukali

Wind-Powered Aeration System for Effective Cyanobacteria Control in Reservoirs
Sebnem Elçi, Oguz Hazar and Inci Tuney Kizilkaya

A.3.6 Water Reclamation and Reuse

Advancing Membrane Technologies for Sustainable Agriculture: a Hybrid Electrodialysis-Forward Osmosis Approach for Nutrient and Water Recovery
Xue Jin and Quang Tran

Analysis of the Prospect of Wastewater Recycling and Utilization in China's Highway Service Areas
Ge Cao, Dong Ni and Shegang Shao

Application of Solar-Powered Electrochemical Advanced Oxidation Process for Textile Wastewater Treatment
Yemane G. Asfaha, Feleke Zewge, Teketel Yohannes and Shimelis Kebede

Renewable Energy Approach for Wastewater Reuse in Horizontal Flow Constructed Wetlands and Solar Powered Drip Irrigation Systems in the Caribbean: a Case Study in the Caroni River Basin, Trinidad and Tobago, West Indies
Michelle Shah and Kiran Tota-Maharaj

Reverse Osmosis Versus Nanofiltration for the Removal of Organic Contaminants in Water Reuse Application
Mohammed Alhussaini and Andrea Achilli

Revitalizing Sustainable Water Practices along with Modern Technologies to Combat Water Crises: Indirect Groundwater Recharge Using Recycled Water
Kavita Verma, Manjari Manisha, Santrupt Rm, Chanakya Hn and Ln Rao

Understanding Urban Stormwater Toxicity on Microalgae: Implications for Reuse Safety
An Liu

A.3.7 Seawater Desalination

Brackish Waters Discharged by Desalination Plants: Impact on Coastal Flow
Francesca De Serio, Diana De Padova, Mouldi Ben Meftah, Ginacarlo Chiaia and Michele Mossa

Environmental Impact and Mitigation Strategies for Marine Brine Discharges from Seawater Desalination Processes
Jose Francisco Sanchez Gonzalez, Manuel Antequera Ramos and Jose Maria Grassa Garrido

Sustainable Water Purification through Upcycled Porous Carbon Electrodes in Flow-Through Capacitive Deionization Systems
Jyotiraman De, Sumit Saxena and Shobha Shukla

A.3.8 Cross-boundary Water Transfer

Computational Fluid Dynamics (CFD) Analysis on the Migration Characteristics of Air Pockets in Long-Distance Pressurized Water Pipelines
Xiangpeng Mu, Zihou Niu, Wenxue Chen, Wei Cui and Zheqi Zhang

Hydrodynamic and Water Quality Simulation of the Nansi Lake Basin Based on T-UWMM
Lingjiang Lu, Yongcan Chen and Zhaowei Liu

Prediction of Water Level Rise Upstream of Gate Closures in Large Open Channels
Wei Cui, Zhinan Ding, Xiangpeng Mu, Yuling Lei, Hui Liu and Wenxue Chen

Study on Water Drainage Processes in an Extra-Long Pressurized Water Delivery Tunnel
Chenxi Ouyang, Zhigao Zhao, Chengpeng Liu, Xiuxing Yin and Jiandong Yang

A.3.9 Alternative Water Resources

Treated Wastewater as Alternative Water, Energy and Nutrient Source Made Possible with Anaerobic Process in High Rate Bioreactors
Maria Concetta Tomei, Valentina Stazi, Marco Manetti and Domenica Mosca Angelucci

A.3.10 Multi-objective Optimisation

Comparing Optimization Methodologies for Calibration of 2D/3D Hydrodynamic Models
Clemens Cremer, Jesper Sandvig Mariegaard, Henrik Andersson, Jannik Elsässer and Faro Schäfer

Integration of a Genetic Algorithm with CFD Simulation to Reduce the Maximum Local Scour Depth on Piers with Simplified Artificial Roughness
Angelica Lizbeth Alvarez Mejía, Humberto Salinas Tapia, Carlos Diaz Delgado, Juan Manuel Becerril Lara, Juan Antonio Garcia Aragon and Jesus Ramiro Felix Felix

A.3.11 Other Related Topics

Dam-Break Wave Propagation: Benchmark Study For High-Performance Computing
Mario Oertel

Development Of A Comprehensive Framework To Compute System Head Curves For Pump Selection In Open And Closed Water Distribution Systems
Diego Paez

Development Of A Lagrangian Plastic Transport Model For Application In Fluvial Systems
Charuni Wickramarachchige, Matthias Kramer and Robert Niven

Development Of Integrated Analysis For Runoff, River Flow And Flooding Flow (Rri-Rf2d Model)
Nozomu Mitsui, Jin Kashiwada, Riku Kubota, Yutaro Omi, Takehiko Ito, Mamoru Tanaka and Yasuo Nihei

Discontinuous Galerkin Turbulence Simulator For Shallow Vortical Flow With Mixed Eddy Structures
Xitong Sun and Georges Kesserwani

Dynamic Water Quality Modeling Based On Cellular Automata: Real Application To Heron Lake
Umar Alfa, Laurent Lefevre, Eric Duviela and Auwal Shehu Tijjani

Dynamics Of Microplastics In The Largest Freshwater Lake Of China
Wang Hua

Enhancements Of A Two-Dimensional Shallow Water MPS Method To Model Non-Newtonian Flash Floods
Herman Siaben Musumari and Ahmad Shakibaeinia

Experimental And Numerical Study Of Free Surface Elevations And Surface Velocities In A T-Shaped, Lab-Scale Confluence Flow
Alemu Tezera Dessie, Saeed Hashemikia, Pedro Ramos, Greet Deruyter and Tom De Mulder

Exploring The Sensitivity Of Microplastic Accumulation Zones In Rivers Using Cloud-Based Particle Transport Modelling
Katelyn Kirby, Mohammad Ghazizadeh, Abolghasem Pilechi and Julien Cousineau

Fast 1D Flood Simulation Parametrised By 2D Hydraulic Models
Behzad Jamali, Reinier Koster, Monique Retallick and Mark Babister

Improving Sedimentation Efficiency In Accelerator Decanters: A Case Study Using CFD
Celia Ortega Flores, Antonio Lastra de la Rubia, Jaime Botello Herranz, Mónica Ortega Cano, Emilio Arenas, Carlos Tomé and Juan Jesús Alonso

Improving Water Quality Model Performance With Autocalibration: Assessing Impact Of Hydrological Variability
Tianyu Fu and Chen Zhang

Improving Water Quality Modelling In Water Distribution Network: A New Indicator For Accurate 1D-2D Model Integration
Stefania Piazza, Mariacrocetta Sambito, Gabriele Freni and Orazio Giustolisi

Integrated Air And Water Phase Modelling Of Hydrogen Sulphide Transport In Sewer Systems
Line Karin Mortensen, Gediminas Kirsanskas, Anne Katrine V. Falk, Jesper Grooss and Lars Yde

Modelling The Spatiotemporal Transport And Fate Of Microplastics In Tropical Coastal Waters
Felix Gaffu Tandadjaja, Xuneng Tong and Karina Yew-Hoong Gin

Non-Velocity-Based Technique For Discharge And Roughness Estimation In Steady Flow
Behnam Balouchi, Mohammad Javad Abedini and Ayda Mirzaahmadi

Numerical Analysis Of Air Entrainment Of A Plunging Jet Flow Under Different Viscosity Levels Of Fluid
Dasun Lahiru Muthumala Jayasooriya, Maggie Bingo, Eoghan Clifford, Stefan Felder, Matthias Kramer and Sean Mulligan

Numerical Modeling Of Sediment Transport And Flow Dynamics In Bioswales For Enhanced Stormwater Management
Habib Ahmari and Saman Baharvand

Numerical Simulation Of Stream Power Bedrock Erosion Rate Formula In A Mixed Alluvial And Bedrock River
Chung-Ta Liao, Kuo-Wei Li and Kuo-Wei Wu

Predicting Water Temperature In Southeast Asian Reservoirs And Their Downstream Rivers
Matteo Redana, Xin Yi Chong, Tomas Maul, Karen Lee and Chris Gibbins

Real-Time Water Consumption Model Using Google Popular Times: A Cost-Effective Alternative To Smart Water Metering
Milad Rajaei, Usman Safder, Sarah Cotterill and Recep Kaan Dereli

Reproducing Suspended Sediment Transport In Half-Channel Vegetated Flow Using 2D Horizontal Eddy Viscosity Models
Jiaqi Liu, Francesco Bregoli, Wim Uijttewaal, Alessandra Crosato and Giulio Calvani

SERGHEI-SWMM: An Efficient High-Performance 1D-2D Bidirectional Hydrodynamic Model
Na Zheng, Zhi Li and Junbo Wang

Simulation Of Flow And Fish Behavior Including Check Dams (Groundsills) And Fishways In The Toyohira River Using Iric-Gelato
Michihiro Hamaki, Kazuya Sakamoto, Taishi Morita, Yoshihumi Konno and Yasuyuki Shimizu

Spatial And Temporal Variations In Water Quality Of A Cold-Region River In 2000–2021
Ge Yang, Yuntong She and Wenming Zhang

Towards Integration Of Fish Growth Models In Aquaculture Pond Tanks With Rigorous CFD Based Predictions Of Water Aeration
João Marques, Rita Carvalho and Fernando Bernardo

A.5.4 Computational Methods for Coastal Processes (Waves, Currents, etc.)

A CFD-FEM-IBM Scheme For Simulating The Strong Coupling Between The Fluid And The Deformable Structure
Jia Mao and Lanhao Zhao

Adjoint Data Assimilation For Tidal Stream Energy Modelling Optimisation
Connor Jordan and Athanasios Angeloudis

Analysis Of Three-Dimensional Dynamics In The St. Lawrence Fluvial Estuary
Maëlys Le Mouel, Abdelkader Hammouti and Damien Pham Van Bang

Fluid-Structure Interactions Based On A Large Eddy Simulations Numerical Wave Tank
Aristos Christou and Zhihua Xie

Investigating Wave Propagation Over An Offshore Breakwater: Experimental Results And Numerical Approach With Shallow Water Modeling

Bobby Minola Ginting, Shu Kai Ng and Tatsuhiko Uchida

Modelling Of Sediment Clump In Open Water Sediment Disposal
Jenn Wei Er and Adrian Wing Keung Law

Monte Carlo Simulation For Projection Of Extreme Wind Speed Increase Due To Climate Change
Neptune Yu, Ander K C Chow, Terence H F Leung, Christopher J Wong, Dickson T S Tsui and Ivan N F Wong

Numerical Investigation Of Regular Wave Interaction With Cylinder Array
Ashutosh Priyadarsan and Mohammad Saud Afzal

Numerical Study Of Wave Attenuation Across Different Vertical Vegetation Zones
Julio Ramirez, Mitchel Jara and Luis Moya

Numerical Study On The Effect Of Baffle Quantity On Sloshing Reduction In A Rectangular Tank
Tianze Lu and Deping Cao

Tsunami Urban Run-Up Modelling With A HPC Distributed-Heterogeneous Shallow Water Solver
Rui M L Ferreira, Daniel Conde and Ana M Ricardo

Vortex Scouring Process Around A Vertical Pile Varying Shapes And Flow Regimes
Abdelkader Hammouti, Mario Hurtado-Herrera, Miguel Uh Zapata, Wei Zhang, Kim Dan Nguyen and Damien Pham Van Bang

Wave-Induced Seabed Liquefaction: Numerical Simulation And Analysis
Yonglai Zheng, Zhengxie Zhang, Xubing Xu, Guangjue Huang and Xin Lan

A.5.5 Data-Driven Methods and Machine Learning Techniques

A Gray-Box Modeling Approach For Predicting Groundwater Levels And Analyzing Hydro-Geological Processes In The Central Taiwan
Abdoul Rachid Ouedraogo and Shaohua Hsu

A Random Forest-Based Traceability Method For Drifting Corpse Drop Sites
Yu-Zhao Xie, Xiang-Ju Cheng and Ze-Hai Chen

Adaptive Machine Learning Based PID Gain-Scheduling Control For Francis Turbines
Zhun Yin, Hong Wang and Zhongping Jiang

Advancing Hydrological Modeling In Complex Terrain With Satellite Data And Integrated Hydrological-Soft Computing Approaches
Muhammad Adnan Khan and Jürgen Stamm

Analysis Of Rainfall Monitoring Network By Evolutionary Polynomial Regression
Daniela Malcangio, Tiziana Bisantino and Daniele Biagio Laucelli

Application Of Feed Forward Neural Networks In Predicting Scour Depth Around Bridge Piers
Farooque Rahman and Rutuja Chavan

Automatic Quality Control Of Rain Gauges Using Machine Learning And Generalization To A Catchment
Karen Schulz and Andre Niemann

Building Trust In Machine Learning Based Quality Control Through Model Evaluation Having No Reference Data: A Case Study On Water Level Measurements
Karen Schulz, Andre Niemann and Thorsten Mietzel

Comparison Of Performance Between Single And Global Machine Learning Models For Reservoir Storage Prediction
Rishma Chengot, Helen Baron and Nathan Rickards

Data Completion For River Cross Section Morphology Under The Water Based On Deep Learning Models
Haoran Li, Chenxi Ma, Zecong Tang, Boyuan An, Chao Qin, Yuan Xue, Ziyi Wang, Yicheng Ma and Xudong Fu

Data-Driven Leak Detection In Real Water Distribution Networks With Multiple Excitation
Mostafa Rahmanshahi, Huan Feng Duan, Alireza Keramat and Vincent Tjuatja

Enhanced Prediction Of Groundwater Quality Index Using Machine Learning Algorithms
Tahmida Naher Chowdhury, Rajat Nag, Md Arman Habib and Md Salauddin

Estimating Dam Seepage Rate Using Machine Learning Techniques For Dam Diagnosis
Hokuto Okabe, Mariko Suzuki and Kazuya Inoue

Evaluation Of Physics-Informed Neural Network (PINN) Performance For Modelling Water Hammer
Vincent Tjuatja, Alireza Keramat, Mostafa Rahmanshahi and Huan-Feng Duan

Flow Routing In Rivers With Neural Networks
Bryant Sandoval, Alejandro Mendoza and Eliseo Carrizosa

Integration Of High-Resolution Physical Flood Simulations With Machine Learning For Urban Flood Prediction
Ryosuke Akoh, Muhammad Adnan Khan and Jürgen Stamm

Laboratory Channel Widening Simulation And Prediction Considering Soil Type, Upslope Inflow And Slope Gradient
Ziyi Wang, Chao Qin, Haifei Liu and Robert Wells

Leak Detection Of Water Distribution Pipelines Based On WT-MFCC And Multiple Neural Network Models
Kaiyi Tan and Yiyi Ma

Modeling And Predicting Lake Hydrodynamics Under Sparse Data Conditions Using CONVLSTM-PINN
Zhengbang Zhou, Saiyu Yuan and Hongwu Tang "

Performance Evaluation Of Kolmogorov-Arnold Networks In Runoff Prediction
Xiaoyu Ye, Dong Wang, Chenlu Yu, Zhuo Yang and Along Zhang

Physics-Informed Neural Networks With Automated Parameter Scaling For Simulation Of Water Pollution
Chongren Meng, Zewei Sun, Qingzhi Hou and Xuliang Yang

Predict Suspended Sediment Concentration In An Alpine Stream Using Data-Driven Modelling
Giulia Stradiotti, Daniele Dalla Torre, Giuseppe Roberto Pisaturo, Michele Larcher, Maurizio Righetti and Andrea Menapace

Prediction Of Sediment Trasport By Applying Machine Learning Techniques
Ishraga Osman and Mohammed Seaid

Prediction Of Water Level And Quality Changes In The Yeongsan River, Korea Using An Lstm-Based Deep Learning Model
Go Eun Jang, Hye Ji Han, Ji Won Seo and Yong Gyun Park

Real-Time Predictions Of Suspended Sediment Concentration Using Machine Learning
Mohamed Saber, Ryoya Furuie, Ahmed Emara, Sameh Kantoush, Tetsuya Sumi and Emad Mabrouk

Robust Sensor Data Validation With Deep Learning: Performance Analysis With Synthetic Anomalies
Rocco Palmitessa, Erling Amundsen and Jesper Mariegaard

Selection Of Machine Learning Algorithms For Reservoir Inflow Forecast: A Case Study Of The Da River Basin
Nguyen Duc Hanh, Le Huu Minh Quan, Nguyen Thi Phuong Anh, Nguyen Tien Giang, Dao Ba Huy and Nguyen Que Chi

Sensor Placement Optimization And Anomaly Detection In Water Distribution Networks Using Artificial Intelligence
Furqan Rustom, Usman Saeed, Anca Delia Jurcut, Gabriele Freni, Mariacrocetta Sambito and Md Salauddin

Spatial Structure Analysis For Downscaling Oceanic Information
Xiaoyu Liu and Xuan Wang

Study On How Shapes And Distributions Of Synthetic Rainfall As Training Data Affect The Accuracy Of Random Forest Model Augmented With Hydrodynamic Model
Kexin Liu, Ryosuke Akoh and Shiro Maeno

The Application Of Artificial Intelligence Models In Flood Dynamics Simulation
Song-Yue Yang, Y. S. Gan, Kuo-Wei Wu and Tsung-Tang Tsai

Transforming Residential Water End Use Analysis: Unleashing The Potential Of Low-Resolution Smart Metering
Khoi Anh Nguyen, Rodney Anthony Stewart and Hong Zhang

Using Machine Learning To Discriminate Different Types Of Particle Jumps In DNS Of Sediment Transport
Ricardo Rebel, Christian Golla, Ramandeep Jain and Jochen Fröhlich

A.5.6 Hydroinformatics and Big Data Analytics

Analytical Four-Dimensional Ensemble Variational Data Assimilation For Parameter Optimization
Yicong Tong, Xuan Wang and Lige Cao

Characterization Of Acoustic Signals Collected From A Smart Water Network For Leak Detection
Wei Zeng, Martin Lambert, Mark Stephens, Xiang Wang, Ruilin Liu and Chengcheng Yin

How Well Do The Gridded Rainfall Datasets Reproduce The Indian Summer Monsoon Rainfall Events? A Country Wide And Regional Suitability Assessment
Sandipan Paul, Priyank J. Sharma and Ramesh S.V. Teegavarapu

Hydroinformatics Technologies For Supporting Urban Drainage Planning, Maintenance, Flood Response And Reservoir Operations In Singapore
Wing Ken Yau and Tien Ser Tan

Leveraging Urban Digital Twins For Enhanced Flood Risk Management And Decision-Making In Smart Cities
Lars Backhaus and Jürgen Stamm

Study Of The Classification Potential Of Inflows In Water Distribution Networks Within The Visibility Domain
Antonietta Simone, Simone Ripani, Luigi Berardi, Daniele Biagio Laucelli and Orazio Giustolisi

Transient Wave-Based Data Assimilation For Leak Localization In Single Water Pipes
Chen Qiu-Ru, Zhang Jiangjiang, Duan Huan-Feng and Che Tong-Chuan

YR-WIC: A Water-Intelligence-Computing Driven Approach For Sustainable Development Of The Yellow River
Yan Tang, Changgao Cheng and Deshan Tang

A.5.7 Other Related Topics

B.2 WATER AND NATURE

B.2.1 Innovative Solutions for City in Nature with Water

A City Re-Growing with Water: The Implementation of Nature-Based Solution from Large- to Small- Scale
Yangyue Yu, Xinyu Wang and Hui Zhao

Assessing the Hydrological Performance of Green Roof Experimental Trays having Distinctive Configurations
AungNaing Soe, Asaad Y. Shamseldin, Kilisimasi Latu, Conrad Zorn, Rachel Devine, Robyn Simcock and Zoe Avery"

Evaluation to Water Shortage and Instream Flows of Shared Rivers in South Korea according to the Dam Operation in North Korea
Jae-Kyoung Lee, Jae-Hwan Shin, Young-Seok Lee and Jun-Mo Goo

Preliminary Assessment of the Suitability and Effectiveness of Nature-Based Solutions for Urban Flood Mitigation. Methodology, Tools and Application Cases
Eduardo Garcia, Beatriz Tejerina, Luis Carlos Lorenzo, Manuel Del Jesus and César Álvarez

Shaping Water Innovation Ecosystems: A Systems Framework for Governance and Aquapreneurship
Pepe Puchol-Salort, Braulio Eduardo Morera, Ana Mijic and Michael Templeton

Water-sensitive urban design - Innovative climate change adaptation with rain and grey water management in the research project Resource: Mannheim, Germany
Jochen Hack, Manuel Wesemann and Simon Gehrmann

B.2.2 Nature-based Solutions for Upstream Catchments and Small Streams

An Eco-Friendly Solution to Protect the Bank of Highly Tidal Impacted Rivers Eroded by Boat-Generated Wave: A Case Study in the Mekong Delta, Vietnam
Ngoc Pham, Hoa Pham Thi, Tho Nguyen Truong, Bay Nguyen Thi and Hoai Huynh Cong

Assessing the Benefits of Soil and Water Conservation Policies for Water Security and Carbon Sequestration: The Case of Catchments which are Strategic Sources
Nilo Nascimento, Esio Castro, Henrique Almeida, Vanessa Cançado, Vitor Queiroz and Deyvid Rosa

Assessment of Natural Flood Management Schemes: Case Study of Upper Weardale, UK
Medha, Vassilis Glenis and Claire Walsh

A Study of The Impact of Bioswale to Filter NPK Fertilizer for Algal Bloom Mitigation
Rizki Zulapriansyah, Intan Supraba and Muhammad Mufti Azis

Ature-Based Solutions for Flood and Sediment Resilience in Nordic Infrastructure: Perspectives from the EU Nature-Demo Project
Slaven Conevski, Ellen Heffer Flaata, Lukas Frank Seifert, Bente Jessen Graae and Inge Hoff

Evaluating the Effectiveness of Nature-Based Solutions for Small Stream Restoration
Shifteh Mobini, Amir Rezvani, Elisie Kåresdotter and Zahra Kalantari

Evaluation of Nature-Based Flood Mitigation Measures in Alluvial Fan Floodplain
Kazuaki Ohtsuki, Kota Tomaru, Sakiko Yaegashi, Takashi Nakamura, Kazuki Karasawa, Tawa Kota and Rei Itsukushima

Evaluation of Nature-Based Solutions in Hydrological Modelling: A Case Study in the Hindu Kush Himalayas
Hélène Boisgontier, Laurène Bouaziz, Peter Nelemans, Joost Buitink, Mark Hegnauer, Michael O'Hanrahan and Ron Passchier

Integrated Assessment of Green Infrastructure in Achieving Multiple Riparian Management Goals in the Era of Climate Crisis
Yoonji Kim, Cheolho Woo, Jang Yujin and Seongwoo Jeon

Integrating Subgrid Sampling with Nature-based solutions (NbS) Interventions for Enhanced Flood Risk Reduction in the Riseley Brook Catchment
Amrie Singh, Harry Mansfield, Maria Pregnolato and Nigel Wright

Monitoring Perspectives of Natural Flood Management in UK Catchments
Guglielmo Sonnino Sorisio, Daniel Jones, Tsz Fung, Jed Ramsay, Mike Adams and Catherine A.M.E. Wilson

Operation of Pilot-Scale Floating Wetland in the Treatment of Micro-Polluted River Water
Rui Wang, Yaoping Chen, Zhaojing Li and Jiahao Zhou

Validating Risk-Based Mowing Strategies for Aquatic Vegetation Management in Regulated Lowland Streams
Ellis Penning, Koen Berends, John Lenssen, Rosanne Reitsema and Jonas Schoelynck

Wake Characteristics In a Staggered Boulder Array
Yannick Marschall, George Constantinescu, Robert M. Boes and David F. Vetsch

B.2.3 Nature-based Solutions for Large Rivers

Construction of River Barriers in the Jinsha River Basin: Evaluating Development Benefits and Threats to River Connectivity
Lei Huang, Jianming Zhang and Yurong Wang

Design Principles and Multifunctionality of Flood Resilient Landscapes
Borjana Bogatinoska, Jord Warmink, Suzanne Hulscher, Negar Moghtaderi and Annemargreet de Leeuw

Effectiveness of Natured Base River-Bank Protection in Reducing Erosion Rates and Sediment Supply in a Great Barrier Reef Catchment, Australia
Misko Ivezich, James Teague and Ian Rutherfurd

Mainstreaming and Upscaling Nature Based Solutions in Northwest Europe: Experiences from Small and Large Scale Pilots
Ralph Schielen, Geert van der Meulen and Stanford Wilson

Nature Based Solutions in Danube4All – Restoration of the Danube River Basin Waters for Ecosystem and People from Mountains to Coast
Helmut Habersack, Lisa Waldenberger, Abdul Waheed, Marlene Haimann, Ellis Penning and Martin Pusch

Technology and Innovation for Enabling Pre-Feasibility Assessments in Watershed Investment Programs using Waterproof
Carlos Rogeliz, Jonathan Nogales and Pilar Galindo

The Spatiotemporal Distribution Characteristics of Biological bait Sources in Riparian Zones and the quantity estimation Transported into Rivers
Xiangdong Pan, Ran Li, Jingjie Feng, Xiaolong Cheng and Kefeng Li

B.2.4 Nature-based Solutions for Coastal and Estuarine Waters

Conceptual Framework for Mangrove-Based Eco-engineering Solutions
Danica Tothova, William Glamore, Andrew Dansie, Laura Montano Luna and Bradley Henderson

Discharge Coefficients Spillways Labyrinth According Transitional Hydrodynamic Upstream Walls Forms At The Approach Canal.
Gustavo A. Delgado F., Oscar Paz Paiz and Vesile Vesile

Enhancing Mangrove Restoration Through the Socio-Economic Cost-Benefit Approach
Ella Louange, Abel Knipping, Erika Ng Shi-En and and Jaïr Smits

Evolution of the Yangtze River Estuary of China and the Feedback of Tidal Strength under Twenty-Year Scale Strong Human Activities
Jianhua Tang and Xuejun Xu

Experimental investigation on shoreline evolution driven by oyster reefs
Rafael O. Tinoco, Salman Alkhidhr, Kamil Czaplinski and William Nardin

Informing Adaptive Development in Sensitive Coastal Habitats Using Environmental Data and Hydrodynamic Modelling
Thue Geil, David Mcgrath and Kasper Kaergaard

Integrated Approach for Coral Reef Conservation and Rehabilitation in the Philippines
Hiroyuki Takasuna, Katsunori Yamaki, Takashi Nakamura, Wilfredo L. Campos, Yasmin Primavera Tirol, Gilson Andre Narciso, Ayin Tamondong, Yuta A. Takagi, Kristian R. Monay, Raphael De la Rosa, Renmil Lambid, Lucas Felix, Ryan Morales Basina, Jean Rose Maquirang, Beverly Tudence Jaspe, Nobuyuki Nakatomi, Masahiro Tanaka and Kazuo Nadaoka

Investigation of Wave Attenuation Over Mangroves in Singapore
Emily Thong, Yue Jia, Farzin Samsami, Zhi Yung Tay, Jiarui Gary Lei, Ignacio Barranco, Kian Yew Lim and Harrif Santo

Local Stakeholder Engagement in Sustainable Management of Marine Habitats using Satellite Technology – An Example from Malaysia
Silvia Huber, Lisbeth Tangaa Nielsen, Malinda Auluck, Muhammad Adzmin Bin Abdul Fatta, Lin Ji Liaw, Mikkel Bojesen and Lars Boye Hansen

Marsh-fronted seawall for coastal protection: Influence of plant species, seasonality, and sea-level rise on wave dissipation and benefit-cost ratio.
Ernie I. H. Lee and Heidi Nepf

Nature Inclusive Coastal, Ports and Offshore Infrastructures
Jorge Gutiérrez, Fernando Colom and Phil Leblanc

Numerical Modelling Approaches for Assessing Wave Attenuation by Seagrass Meadows and Oyster Reefs: A Systematic Literature Review
Hani Ghasemi, Ali Dastgheib, John O'Sullivan and Md Salauddin

Prediction of Wave Reflection and Attenuation by Artificial Shell Reefs
Elisa Yokemura, Eduardo Puhl and Cláudio Tureck

Strengthening Mangrove Restoration: Portable Breakwater Solutions for Enhancing Sapling Survival and Root Stability
Sindhu Sreeranga and Jiarui Lei

The Evolution of Hydrodynamic Intensities and Sediment Erosion Along Submerged Aquatic Vegetation
Xinya Liang, Yunsong Wang and Jiarui Lei

The Influence of Shoot Distribution on Wave Attenuation and Local Hydrodynamics of Seagrass Meadows
Xihang Xu, Jennifer Keenahan and Md Salauddin

Three Years of Artificial Dune Evolution at Pilot Sites in Belgium: Monitoring, Modelling and Future Prospects
Pieter Rauwoens, Jennifer Derijckere, Jadon Beerlandt, Jianghua Guo, Glenn Strypsteen, Zeger Sierens, Dries Bonte, Sam Provoost, Toon Verwaest, Steven Muylaert and Peter Van Besien

Wave Attenuation by Submerged Vegetation under Orthogonal Wave-Current Conditions
Zichen Xu and Jiarui Lei

Wave Attenuation in Laboratory Vegetated Flume with Different Vegetation Layouts
Yufei Wang and Jiarui Lei

Wave transformation and wave-induced current across reef-type breakwater groups with varying spacing
Yuhua Zheng, Xiaoyan Li, Hongwei Zhang, Jiafa Shen and Chuanguo Cheng

B.2.5 Biodiversity in Aquatic Environments

Assessing the impacts of river restoration measures for a target species: first steps towards new-generation metapopulation models
Francesca Padoan, Giulio Calvani, Giovanni De Cesare and Paolo Perona

Analysis of the Nitrogen Removal Driving Forces in Horizontal Subsurface Flow Constructed Wetlands
Junheng Pan, Baoshan Shi, Xiangju Cheng and Dantong Zhu

Comparing Water Quality Evaluations from a Fuzzy Model and a Multi-Parameter Model
Rosalva Mendoza Ramírez, Rodolfo Silva Casarín, Karina Suárez Alcántara, Aníbal Sol Benítez, Ramon Domínguez Mora and Eliseo Carrizosa Elizondo

Impact of Hydropower Development on Zooplankton Diversity and Community Assembly in the Lower Jinsha River
Xinyi Zhou, Xiongdong Zhou, Jiahao Zhang, Chubin Weng and Mengzhen Xu

Hydrodynamic disturbance and nutrient accumulation co-shape the depth-dependent prokaryotic community assembly in intertidal sediments of a mountainous river estuary
Longfei Wang, Yi Li, Jiaying Chen and Lihua Niu

Keeping Out Invaders: Design and Assessment of a Selective Vertical Slot Fishway to Inhibit the Passage of the Common Carp (Cyprinus Carpio), a Non-Native Invasive Cyprinid
Filipe Romão, Ana L. Quaresma, Francisco J. Brávo-Córdoba, Amaral Susana, Francisco J. Sanz-Ronda, José M. Santos and António N. Pinheiro

Rebuilding Fish Connectivity in River-Lake Systems: Hydrological Rhythm-Based Ecological Management
Jiajian Qiu, Saiyu Yuan and Hongwu Tang

Study on Spatial Heterogeneity Evolution of Oyster Reef in Dashentang, Tianjin
Fengze Zhao, Dekui Yuan, ,Xiaofu Xu and Yuanyi Li

B.2.6 Ecosystem Services

Accessing flood resilience through ecosystem services supply demand framework
Soe Soe Tun and Hao-Che Ho

Evolution and driving factors of water conservation in grassland ecosystem under the background of land use competition
Jing Jin, Zilong Liao, Tiejun Liu, Zihe Wang, Xinjian Zhang and Yining Fan

Fluvial dynamics, sediment transport and climatic variability in the middle Magdalena river valley
Juan Ochoa, Wilson Diaz Urueña and Lilian Posada García

Mangrove Ecosystem Services in Fiji: Bridging Knowledge Gaps in Ecosystem Services Valuation
Laura Montano, Jasma Devi, Brad Henderson, Dana Tothova, Andrew Dansie and William Glamore

Probabilistic method to assess the flood probability of a tidal culvert, ensuring a safe nature and intertidal area inland of the primary water defense
Maarten Schoemaker, Wilfred de Kam, Constantijn Steenbergen, Richard Bloekpoel and Matthijs Kok

B.3 HYDRO-ENVIRONMENT ENGINEERING CULTURE

B.3.1 Hydro-Environment History and Heritage

Applicability of 2D Hydraulic Model for Small-Scale Urban Flood Scenarios in Heritage Sites: A Case Study of Katsura Imperial Villa, Japan
Xi Chen, Kenji Kawaike, Takahiro Koshiba and Keiko Wada

Mike Abbott and the Philosophical Foundations of Hydroinformatics: An Exploration of His Legacy and Vision
Marianna Dodou and George Balafoutas

The Socioeconomic Value of Huizhou Weir in China
Wenjing Lu, Feng Shi and Yijun Guo

B.3.2 Hydro-Environment Development and Cooperation

Overview of Management Systems in International Water-Related Organisations
Yijun Guo, Wenjing Lu and Shi Feng

The application of Serious Games across geographic scales and river basin planning phases: Experiences from Brazil and Colombia
Claudia Coleoni, Camilo Gonzalez and Cristo Perez

UNESCO Water Science – 50th Anniversary of the Interngovernmental Hydrological Programme IHP and 60 Years of Water Science at UNESCO
Helmut Habersack, Anil Mishra, Elfithri Rahmah and Abou Amani

B.3.3 Hydro-Environment Education

Demonstration Center for Urban Water Cycle at a University Building Scale
Andrej Vidmar, Tomo Cerovšek and Matjaž Mikoš

Innovative Teaching Techniques for Hydro-Environmental Engineering
Kambiz Teimour Najad and Amin Mohebbi Tafreshi

Spatio-temporal prediction of water production in basins without records
Adriana Márquez-Romance, Mairim Márquez-Romance, Bettys Farias-De Márquez, Edilberto Guevara-Pérez, Sergio Pérez-Pacheco and Eduardo Buroz-Castilllo

The Current State and Development Exploration of Water Science Popularization Education in China
Wenjing Lu, Yijun Guo and Shi Feng

B.3.4 Coastal Resilience and its Definitions

Case Study of Breakwater Response Analysis in the Superposition of Earthquake and Tsunami
Masayuki Takamoto and Nozomu Yoneyama

B.3.5 Social Hydrology and Citizen Science

Is there a need for Model-Based Water Research to Involve Stakeholders: An Insight on Sociohydrology Practices in the Philippines?
Jastine Mae Galang, Leunell Chris Buela and Seth Nathaniel Linga

Sharing Traditional Water Management Techniques to Deliver SDGS and Tackle the Global Water Crisis
David Hetherington, Minni Jain, Louise Bingham and Candelaria Lucero

LISTING OF POSTER PRESENTATIONS

SUB-THEME A: WATER ENGINEERING AND TECHNOLOGICAL INNOVATIONS

A.1 CLIMATE CHANGE MITIGATION

A.1.2 Incorporation of Water-related Renewable Energies

Gharats (Watermills): Sustainable Energy Sources of Himalayas
Kritika Sharma, Vinay Sharma and Navneet Arora

Transboundary Cooperation in Infrastructure Operation Generates Economic and Environmental Co-Benefits in The Lancang-Mekong River Basin
Feng Zhou

A.1.3 Energy Efficiencies to be gained from Water Uses

Energy Self-Sufficient Carbon-Neutral Framework for Wastewater Resource Recovery Facilities in Ireland
Usman Safder, Sarah Cotterill and Recep Kaan Dereli

A.1.6 Other Related Topics

Flooding in Morelia City: Analysis of Extreme Precipitation Events and Their Relationship with The Enso Phenomenon
Luis David Navarro, Liliana García Romero, Sonia Tatiana Sánchez Quispe and Maria Lourdes González ArquerosGaudry

Hydrological Monitoring for Sustainable Development
Adam Hobson and Alex Hing

Impact of Projected Climate Change on Flood Characteristics in the Biebrza Basin (Poland)
Dorota Miroslaw-Swiatek, Paweł Marcinkowski, Mikołaj Piniewski and Mateusz Grygoruk

Improving Climate Resilience in At-Risk Communities in Kenya Via Adaptive Governance and Sustainable Environmental Approaches
Ndirangu Ngunjiri

The Water Contribution of The Glacier and The Dynamics of Glaciological-Hydrological Processes in The Basin Yanamarey - Peru
Arnaldo Tacsi Palacios, Jesús Abel Mejía Marcacuzco and María Cárdenas Gaudry

Water Quality Change Characteristics of Dongping Lake and its Response to Climate Change
Ming Hang Shi, Ming Cong Lv, Zhong Mei Wang, Wen Jiao Zhang and Xing Zhao

A.2 IMPROVING RESILIENCE AGAINST WATER HAZARDS AND NATURAL DISASTERS

A.2.1 Coastal Processes and Hazards

A Systematic Review of Methods for Shoreline Change Analysis: Strengths, Limitations, and Applications
Samya Lamhadri and Mohammed Karim Benhachmi

Extreme Storm Surge and Wave Modelling and its Application to Coastal Engineering Designs
Chun Hin Adrian Lai, Jie Hu, Kuifeng Zhao and Yaodong Zhang

Innovative Flood Risk Management Solutions: The Floodblock System by Dryup Swiss Technology
Mohamed Outiskt, Ramos João Pinto Francisco and Aboumaria Khadija

Modeling Hydrodynamic and Wave Impacts of the Largest Proposed Manila Bay Reclamation Project using Delft3D FLOW-WAVE Coupled Modules
Marvi Leu Dalogdog, Dominic Bautista and Justin Joseph Valdez

Study on the Typhoon-Induced Storm Surges and Waves for The Coast Of Hong Kong
Guannan Wang, Zhuowei Zhou, Xin Xu, Wenbo Gao and Quanke Su

A.2.2 Hydraulic Structures and Processes

2-D Physical Hydraulic Model Testing of a Reef Breakwater- A Case Study in Maldives
Sanjeewa Wickramaratne, Sujeewan Gajasinghe and Sarada Gunasekara

A Scoping Study of Pier Scour Under Pressure and Overtopping Flow
Jin A Jegal and Seung Ho Hong

A Structural Reliability Method for Mitre Gates of Ship Lock Based on Improved JC Method
Liaojun Zhang and Shifeng Zhang

Comparison of Dam Breach Parameters Using Different Empirical Models
Ankit Jain, Kartikeya Mishra, H.L. Tiwari and M.K. Choudhary

Derisking a Spillway Rating Curve when Overtopping of a Walkway is Expected
Chris Frias and Kinda Chakas

Design of Aqueducts from the Perspective of Resilience, United Nations' Sustainable Development Goals, and Climate Change
René Autrique

Erosion and Flood Control in The Municipalities of Apartadó and Carepa in Colombia for The Protection of Riverside Communities
Adrian Muñoz, Lilian Posada and Daniel Upegui

Experimental Study of Local Scour Downstream of a Stilling Basin
Anika Govil, Nishank Agrawal, Ellora Padhi and Gopal Das Singhal

Flip Bucket Performance at Three Times the Design Discharge, including Pressure Measurements and Comparison to Design Guidance
Mike Phillips, Brian Crookston, Julie Allen and Yajayra Diaz

Flow Through Porous Weir
Ali Shariq and Mohammad Saud Afzal

Form and Friction Drag Coefficients of Fine Screens: Streamlined and Rectangular Bar Profiles
Cumhur Özbey and Serhat Küçükali

Hydraulic Engineering for Fish Self-Liberation in Reservoirs
Emerson Parra

Hydrodynamic Analysis of Submerged Vanes in Curved Fixed-Bottom Channels by Three-Dimensional Numerical Modeling
Ricardo Sebastián Sandoval Garzón, Karen Jasmin Soto Morales, Cristina Alexandra Torres Jacobowitz and Jorge Augusto Toapaxi Alvarez

Impacts of Slope on Hydraulic Performance of Stepped Chutes: A Case Study - Whittier Narrows Dam
Yajayra Diaz, Micheal Phillips, Ethan Thompson and Christopher Thornton

Labyrinth Weirs: From Past to Future
Lisa Lüddecke and Mario Oertel

Large Eddy Simulation of Evolution of Flow Field and Force Fluctuation of Half-Cone Woody
Wenjun Zhang

Measurement of Velocity Fluctuations at The Base in Unsteady Flow
Şevket Çokgör, Torkan Hassani and Mona Masoudnia

Metaheuristic Optimization of Open Channels Using the Water Cycle Algorithm
Cesar A. Lifonzo Salcedo and Yeny L. De La Cruz Arango

Optimization of Hydraulic Design of Intake Structure Under DTSS Phase 2 Contract T-08
Anil Kumar, Ling Chye Wong, Toshio Araki, Taichi Shibano and Benjamin Koh

Parameter Estimation and Identifiability of Oxygen Transfer in Self-Aerated Flows
Ashwini Tiwari, C.S.P. Ojha and K.S. Hari Prasad

Pressure Fluctuations over the Spillway Bottom Under Unsteady Flow
Torkan Hassani and Şevket Çokgör

Research on Horizontal Bearing Characteristics of Suction Pile Dam
Xing Zhao, Zhongmei Wang, Wenjiao Zhang, Mingcong Lv and Caiping Wu

River Protection Projects Using Geocells
Gustavo Fierro

Scale Effects of Self-Aeration Development in High-Speed Flows
Wangru Wei and Jun Deng

Structure Optimization of Urban Emergency Flood-Control Barriers
Jinchao Xu, Xiaodong Wang, Min Liu, Sadashiv Chaturvedi and Jun Zhao

Study on the Turbulence Characteristics of Water Flow in the Branching Area of Open Channels
Yan-Fang Zhao, Yu Han and Runzhi Hu

Sustainable Deep Wells for Schools and Communities: Harnessing Technology & Eco-Friendly Innovative Engineering Solutions to Enhance Water Security and SDGs In Cameroon
Francis Njuakom

TOMAAPP, A New Software for Hydraulic Design of Conventional Intakes
Johan Alejandro Villanueva Anlas, Miguel Angel Astorayme and Ronald Gutierrez

Turbulence Behaviour of Porous Weir Under Through Flow Condition
Mohammad Saud Afzal and Ali Shariq

A.2.3 Enhancements in Urban Drainage Systems

A Flood Assessment Using Dual Drainage Modelling for A Commercial Development in New Zealand
Dat Vu, Gregory De Costa and Induka Werellagama

A Study on the Determination of Flood Control Volume for Deep Storm Water Tunnel Design
Taekmun Jeong, Soodeok Hwang, Dongyeop Lee, Jongpyo Park and Yeoeun Lee

Adapting to Hydrological Change: Blue-Green Infrastructure and Technological Innovations for Resilient Island Nations
Pedro Santa

Flow Analysis of Tangential Inlets in Underground Stormwater Drainage Tunnel under Varying Flow Rates
Kyu-hyun Park, Dong Sop Rhee and Seongwook Choi

Role of Nature-Based Solutions in Mitigating Urban Flooding: A Case Study of Driminagh Neighbourhood in Dublin, Ireland
Salman Khan, Mehdi Gholamnia, Fiachra O'Loughlin and Payam Sajadi

The Effect of Green Roofs on The Pressurisation of Stormwater Drainage Networks
Dat Vu, Gregory De Costa and Induka Werellagama

Variations in Precipitation Patterns: An Analysis of 17 Years of Hourly Rainfall Data for Recently Drought Areas
Elena Carcano

A.2.4 Sediment Transport and Bathymetrical Changes Assessment

3D Rans-Vof Simulation of Breaching Process of Granular Dams
Tirtha Roy-Biswas

Alpine Reservoir Sedimentation: Challenges In Modelling Rapidly Varying Flow Conditions at Inflow Section
Sudesh Dahal, Frederic Martin Evers, Robert Michael Boes and David Florian Vetsch

A Mapping Tool for Spatial Distribution of Suspended Sediment Concentration using Sontek Down-Looking ADCP Snr Data
Boseong Jeong, Dongsu Kim, Suin Choi and Youngdo Kim

An Investigation of Scour Formation and Turbulence Statistics Due to The Swirling of Fluid Flow in A River
Haradhan Maity

Analysis and Extension of Streamflow and Sediment Load in the Jialing River Basin
Jiao Zhang, Penghao Wang, Zhanbin Li, Wen Wang and Peng Li

Assessing Morphological Changes in The Lærdal River: A Comparative Study Using Green Lidar Bathymetry Data
Christy Ushanth Navaratnam, Aslaug Marie Tvinnereim Otnes and Knut Alfredsen

Computation of Sediment Transport Pattern Along The South East Coast of Tamil Nadu, India
Suresh Pallavur Krishnamurthy, Sundaravadivelu Renganathan, Prasad Chintaluri Venkata Chintaluri Venkata, Sakthival Sundaravadivelu and Dhanasekhar Kollu

Effect Of Sediment Mobility On Scour Around Brige Piers
Kattia Rubi Arnez Ferrel, Daisuke Harada and Shinji Egashira

Flume Experiment on Morphological Phenomena on Incising Riverbeds
Roman Dunst, Mario Klösch, Thomas Gold, Arline Khünl-Brady, Rolf Rindler and Helmut Habersack

Hydraulic Erosion Mechanisms and Predictive Modeling in Embankment Dams
Gensheng Zhao

Impact Assessment of Landslide Dams on Flood Inundation: A Case Study on The Okoy River
Richmond Dave Camingawan, Anne Jeanette De La Rosa, Elaine Marie Pena and Roy Anthony Luna

Numerical Study on Clear Water Scour Around Complex Pier with Different Pier Cap Shape in Single Phase Medium
Amit Sinha

Qualitative And Quantitative Comparison of Quasi-Equilibrium Bed Features In T-Shaped, Lab-Scale Confluences
Saeed Hashemikia, Alemu Tezera Dessie, Greet Deruyter and Tom De Mulder

Recreational-Grade Sonar: Data Collection and Management for Reconstructing The Bathymetry Of Large Rivers
Xin Yi Chong, Matteo Redana, Estrella Carrero-Carralero and Chris Gibbins

Seasonal And Long-Term Dynamics of Suspended Sediment Transport in Bozçay Creek, Türkiye
Veysel S. Yavuz

Simulation of Soil Erosion due to Heavy Precipitation Using a Two-Dimensional Hydrodynamic Numerical Model
Rebecca Hinsberger and Alpaslan Yörük

Spatial Riverbed Elevation Variation and Reasonable Cross-Sectional Intervals in Bathymetric Measurements in The Vietnamese Mekong Delta
Doan Van Binh, Luc Anh Tuan, Sameh A. Kantoush, Binh Quang Nguyen, Menna Farag Ahmed and Tetsuya Sumi

Three-Dimensional Numerical Analysis of Local Scour Around a Cylinder in A Wave-Current Coexisting Field Using Nonequilibrium Bedload Transport Model
Yuki Kajikawa, Miina Honda, Shinya Magome, Chisato Hara, Masahide Takeda and Masamitsu Kuroiwa

A.2.5 Forecasting and Warning

A Study on Asset Management Techniques Through Evaluating the Deterioration and Residual Lifespan of Sewer Pipes
Jihoon Choi, Inhee Yeo, Jun Lee and Sujin Moon

Deep Learning Models for River Flow Prediction: A Comparative Study of Transformer Architectures
Zhuo Yang, Xiaoyu Ye and Dong Wang

Flood Early Warning System for The City of Morelia, Mexico
Israel García-Ledesma, Jesús Pardo-Loaiza, Sonia Tatiana Sánchez-Quispe, Constantino Domínguez Sánchez and Giovanni Carlo Flores Fernández

Flood Frequency Assessment of The Himalayan Mountainous Beas River: A Case Study, Using Various Probability Distribution Functions
Shakeel Rather, Mahesh Patel and Kanish Kapoor

Improving Flood Early Warning System Forecasts using Uncertainty
Jeannette Zambrano and Juan Jose Gomez

Investigation into Groundwater Level Prediction Utilized Spatial-Temporal Graph Convolutional Networks
Zhenyue Han, Fawen Li and Yong Zhao

Machine Learning-Based 2D and 3D Abrasion Mapping: Evaluating The Influence of Successive Flood Events in Sediment Bypass Tunnels
Ahmed Emara, Sameh Kantoush, Mohamed Saber, Tetsuya Sumi and Emad Mabrouk

Meteorological Drought Prediction Using Advanced Spatio-Temporal Downscaling Of Glosea6 Climate Forecast Data
Jeongwoo Lee, Minwoo Park, Gihyun Park and Hyun-Han Kwon

Monthly Rainfall Prediction Model Based on CONVLSTM2D
Jiayan Xu, Shuguang Liu, Zhengzheng Zhou and Guihui Zhong

Now Cashting Data Development for Flood Early Warning System at Upper Ciliwung Watershed
Evi Anggraheni, Muhammad Rizal and Muhammad Adek Rizaldi

Numerical Modeling of Salinity Distribution in Tidal Rivers: Integrating Improved 2D Grid Method, Flow Resistance Method, and Dispersion Terms
Wang Zhi and Li Manjie
Study on Hydraulic Calculation Theory of Ice Jam Thickness in The Middle Route of South-To-North Water Diversion Project
Yinqin Tang, Tong Wang, Jingwei Feng, Jun Wang and Jueyi Sui

Urban Flood Susceptibility Study: An AHP-Based Geospatial Multi-Criteria Evaluation in Kigali City, with a Focus on the Mpazi Catchment
Iraguha Pierre Damien and Hirwa Tresor

A.2.6 Disaster Risk Reduction

A Coupled Numerical Model for Simulating the Interaction of Irregular Waves with Flexible Aquatic Vegetation
Huiran Liu and Pengzhi Lin

Assessing the Role of Human Activities on Drought Risk in Northwestern Rajasthan
Saran Aadhar and Piyush Sengar

Comparative Analysis of Empirical Storm Surge and Tsunami Structural Vulnerability Curves of Non-Engineered Low-Rise Masonry Buildings in Philippines and Indonesia
Maria Erica Gomez, Liezl Raissa Tan, Imee Bren Villalba and Justin Joseph Valdez

Computational Modeling and Analysis of Debris Flow in Mountainous Regions
Arjun D C and Bandita Barman

Determination of Drought Vulnerability in the Angulo River Basin
Carolina Rocha Delgado, José Jaime Madrigal Barrera and Sonia Tatiana Sánchez Quispe

Flood Risk Adaption Measures Comparative Approaches at The Mono River Basin and Oueme River Basin in Benin Republic
Julien Adounkpe, Yvonne Walz, Sally Janzen, Adrian Almoradie and Mariele Evers

Flood Risk Assessment for Transportation Networks to Enhance Resilience and Emergency Preparedness
Natasha Petruccelli, Alessio Domeneghetti, Caterina Malandri, Maria Nadia Postorino, Luca Mantecchini and Armando Brath

Flood Risk Investigation with Application of Low Impact Development Facilities in Urban Areas using Storm Water Management Model
Dogyu Lee and Inhwan Park

Geospatial Modelling - The Nexus for Climate Induced Hazard Assessment and Informed Decision Making for Disaster Risk Reduction
Dawie Jansen van Vuuren, Kayla Theron, Jayati Shukla and Jie Hu

Impact of Main River Water Level on Sediment and Flooding in Tributary Areas
Norio Harada, Ichiro Kimura and Yoshifumi Satofuka

Implementation of Pervious Pavement to Reduce Surface Run-Off for a Highly Populated, Urbanized Area
Kutay Yılmaz and Yunus Oruç

Inversion Method for Working Behavior of Prestressed Anchor Cables in Dam Foundation Driven by Structural Health Monitoring Data
Hanyi Niu and Bo Chen

Sizing Hydraulic Structures for Flooding under Climate Change Driven Sea Level Rise
Kutay Yılmaz and Yunus Oruç

Study on Machine Learning Method Based on Vector Direction of Flood Process for Flood Forecasting
Tianning Xie, Chengshuai Liu and Caihong Hu

The Impact of Tributary Debris Flow on the Sediment Transport of Main River
Weipeng Hou, Chendi Zhang, Guo-An Yu and Peng Cui

Spatiotemporal Variations Of Flood Wave Propagation Characteristics And Coincidence Risk In The Middle And Lower Reaches Of The Yangtze River Based On A Large-Scale Hydrological- Hydrodynamic Coupling Model
Guolin Zhao

Analysis of High-Frequency Stratification in Paldang Reservoir Caused by Hydraulic Structures
Soo Bin Yoon, Chang Hyun Lee, Dong Su Kim, Yong Sik Song and Young Do Kim

Analysis of Spectral Data Variability due to Light Source and Luminance for Depth Monitoring
Gwangmin Ok, Hosoo Lee, Yeonghwa Gwon, Dongsu Kim and Young Do Kim

Development of Advanced Techniques for 3D River Analysis using Sensors
Gwangsoo Kim, Chang Hyun Lee, Soobin Yoon, Yejin Lee and Young Do Kim

Fabrication of Metal-Biochar via Co-Pyrolysis and its Application into the Removal of Potentially Harmful Elements from Aqueous Solution
Dong-Wan Cho and Jeong-Yun Jang

Plasma Treatment of Agricultural Wastewater, Growth Media & Production of PAW (Plasma-activated water).
Muhammed Hossain and Kiran Tota-Maharaj

Study on Total Nitrogen Prediction Based on Various River Characteristics
Su Han Nam, Siyooun Kwon and Young Do Kim

The Effect Of Sediment Reduction Into Wetland By Channel Re-Meandering Work On Kushiro Wetland Restoration Project
Taro Yamamoto, Norio Ishida, Daigo Inagaki and Kiyotaka Sagai

The Use of a Bespoke Monitoring Strategy to Understand the Source of Pollution and Water Quality Change: The Example of the Upstream Thinking Project (UK)
Emilie Grand-Clement, Jaeyoung Lee, Yu-Ting Chen, Josie Ashe, Daniella Montali-Ashworth, Erica Boston, Cameron Clark and Richard E. Brazier

A.6.6 Remote Sensing – Satellite

Integrating SAR-Based Flood Mapping and Hydraulic Modelling for Flood Risk Assessment in the Gumara Watershed, Upper Blue Nile Basin, Ethiopia
Haile Belay Desta, Assefa Melesse and Getachew Tegegne

A.6.7 Remote Sensing – Others (Unmanned Aerial Vehicles (UAV), Radar, etc)

Monitoring of Wheat Crop and its Phenology Pattern using UAV Multispectral Data
Adwait Adwait, Ghanshyam Giri, Hitesh Upreti and Gopal Das Singhal

A.6.8 GIS Applications

Geo-Morphometric Study of Mahanadi Basin Using Remote Sensing (RS) and Principal Component Analysis (PCA) Technique
Mohit Kumar, Ashish and Indra Kumar

Geospatial Solutions for Enhanced Groundwater Security: Advancing Managed Aquifer Recharge in a Changing Environment and Society
Akanksha Soni, Balaji Narasimhan and Venkatraman Srinivasan

GIS-Aided Evaluations of Land-Use Change and CO2 Emission in Fukuoka, Japan
Jindi Guo and Yuji Sugihara

Linking Hydrogeological Attributes of Springsheds and Groundwater Aquifers using AHP and Fuzzy Logic Approaches
Prikash Meetei Ningombam, Romeji Ngangbam, Angrungkham Keishang, Rajeshree Khumanthem, Nishi Devi Laimayum and Sunita Devi Rajkumari

Shoreline Change in Eastern Obolo LGA, Akwa Ibom State, Nigeria, between 1986 and 2017 using Geographic Information System (GIS)
Bassey Antai and Ntukidem Blessing

Spatial Analysis and Water Quality Monitoring for Enhanced Water Quality Management in Ho, Volta Region, Using GIS

Solomon Dabillah and Carl Fali Do

A.6.10 Other Related Topics

Geophysical Investigation Applied to Prospecting of Groundwater in Crystalline Rocks: Elvira Granite, Amazon Forest Region, Aripuanã, Mato Grosso State, Brazil
Cristiane Dias de Novaes, Daniel de Araújo Machado, Rejane Suellen da Silva Duarte and Sergio Junior da Silva Fachin

Time-Resolved Velocity Measurements of a Plunging Jet in a Stilling Basin
Rui Aleixo, Jarosław Biegowski, Massimo Guerrero and Margaret Chen

SUB-THEME B: WATER ENGINEERING AND SOCIO-ECONOMIC CONSIDERATIONS

B.1 CLIMATE CHANGE ADAPTATION

B.1.1 Coastal Protection and Management

Numerical Analysis of Sea Level Rise Effect on the Wave Runup Height of Typhoon 1977 Kim for the Camarines Sur Seawall
Vince Rainer Abrigonda, Eric Cruz and Elias Garcia

B.1.2 Flood and Droughts Management

Effects of Bed Erodibility on Non-Cohesive Fluvial Dike Breaching Induced by Flow Overtopping
Zied Amama, Kamal El Kadi Abdererzzak and Lydia Kheloui

Impacts of Precipitation and Potential Evapotranspiration on Future Runoff Under Climate Change Scenarios: A Case Study of The Han River Basin, South Korea
Da Hee Hong, Kyung Jin Lim, Jeongwoo Han and Tae-Woong Kim

B.1.3 Improvement in Design Guidance under Climate Change

Comparing Different Adaptions on Vertical Slot Passes to Enhance Resilience to Anthropogenic Climate Change
Philipp Werner and Nicole Saenger

B.1.5 Resilience Strategies for Extreme Events

Considering Climate Change Projections in the Assessment of Hydrodynamic Loads and Scour Risks on Bridge Piers – A Pilot Case and Results of the EU Project Riskadapt
Gašper Rak and Mateja Škerjanec

B.2 WATER AND NATURE

B.2.1 Innovative Solutions for City in Nature with Water

Hybrid CDS Technology With AI and Green Infrastructure for Sustainable Urban Stormwater Management
Yah Loo Wong and Fang Yenn Teo

B.2.3 Nature-based Solutions for Large Rivers

A Study on the Hydraulic Stability of Deteriorated Levee Repair and Reinforcement Method using a Castor Oil-Based Biopolymer
Hong-Kyu Ahn, Joon-Gu Kang and Dong-Jin Lee

B.2.5 Biodiversity in Aquatic Environments

A Study on the Investigation of River Crossing Structures and the Evaluation of Aquatic Ecosystem Continuity at the Basin Level
Dong-Jin Lee and Hong-Kyu Ahn

PROGRAMME OF ACTIVITIES FOR YOUNG PROFESSIONALS

CAREER TALKS

24 June 2025 (Tuesday) and 25 June 2025 (Wednesday)

Career talks provide a valuable opportunity for young professionals to explore various career paths within the sector. Two career talk sessions will be held each day during lunch time. Senior leaders from utilities, engineering consultancy, start-ups, and research sectors will share their expertise and work experience during each session.

YOUNG WATER PROFESSIONALS (YWP) SYMPOSIUM

24 June 2025 (Tuesday)

Participants will take part in a fireside chat with senior leaders in the field, fostering open discussion and knowledge sharing. The symposium will conclude with the Singapore Water Association (SWA) YWP Mentorship Graduation Ceremony, which honours the accomplishments of participants in the mentorship program, celebrating their hard work and dedication.

YOUNG PROFESSIONALS NETWORK ASSEMBLY

24 June 2025 (Tuesday)

Join and meet the worldwide community of IAHR young professionals and IAHR leaders at their biennial assembly!

YOUNG PROFESSIONALS NETWORK NIGHT

24 June 2025 (Tuesday)

IAHR Young Professionals and SWA Young Water Professionals are invited to the Young Professionals Network Night, an opportunity to connect, exchange ideas, and build professional relationships with fellow young professionals and emerging leaders, over light bites and drinks.

The Young Professionals Network Night will be hosted at an external venue.

JOHN F. KENNEDY STUDENT PAPER COMPETITION

25 June 2025 (Wednesday) | 2:00pm – 5:30pm

The John F. Kennedy Student Paper Competition recognises conference papers from undergraduate and postgraduate students on the basis of written and oral presentations at the IAHR World Congress.

IAHR MENTORING PROGRAMME

Young professionals and new IAHR members can benefit from mentoring to get to know IAHR and its members, be introduced into the IAHR Technical Committees and Working Groups, and to find easier access to this international network of scientists and experts.

More info will be published soon.

CALL FOR RAPPORTEURS

IAHR is looking for rapporteurs (between the ages of 18 to 35) who will be tasked with providing summary reports on the following 41st IAHR World Congress High Level Panels.

Rapporteurs will be the decisive instrumental part of the reporting and conclusions process.

More info will be published soon.

HOW TO WRITE A GOOD PAPER FOR THE JOURNAL OF HYDRAULIC RESEARCH BY PROF PANAYOTIS DIPLAS, LEHIGH UNIVERSITY, UNITED STATES AND JHR EDITOR

26 June 2025 (Thursday)

This session will explore key aspects of the writing process, focusing on the purpose of academic writing and essential elements of excellence. Topics include effective preparation, structuring content, the critical role of revision, and best practices before submission. We'll also discuss how to respond to reviews, the importance of serving as a reviewer, and common pitfalls to avoid.

Additionally, insights into the Journal of Hydraulic Research, its editorial standards, and its role in advancing the field of hydraulics will provide a comprehensive guide to academic publishing in this leading journal. JHR is the flagship of the IAHR Journals.

REGISTRATION AND ENQUIRY

Registration details, including pass types, registration phases and categories, can be found on the official Congress website before registration.

The 41st IAHR World Congress 2025 in Singapore offers various fee structure, including IAHR member and non-IAHR member registration fees, lower registration fees for delegates from low-income countries (based on the World Bank Classification) and students.

Entitlements of a IAHR2025 Singapore Delegate Pass

- Access to IAHR2025 Singapore programmes, including opening, keynotes, technical & special sessions and high-level panels
- Access to solutions marketplace, welcome reception, coffee / tea breaks and lunches

The delegate pass excludes workshops, masterclasses, technical visits and awards & congress dinner which are ticketed separately.

Student discount is applicable to students currently studying in an Institute of Higher Learning. Students are required to email the organiser at registration@iahr2025-singapore.com.sg with a copy of an official supportive letter from the institution, signed by the head of the department, to receive a student promo code.

All registration rates are in Singapore dollars (SGD).

CONTACT INFORMATION

For any enquiries, please contact the Congress Secretariat at: info@iahr2025-singapore.com.sg

Detailed information of the 41st IAHR World Congress is also available here at: https://2025.iahr.org/

[Co-Located Event] Singapore International Water Week (SIWW) Spotlight 2025

Themed *"Flood Resilient Cities: Adapting to Climate Change"*, SIWW Spotlight 2025 to be held from 23-25 June at the Singapore EXPO, will focus on how cities can adapt to climate change and build greater resilience to floods and extreme weather events. This three-day high-level summit will bring together over 300 leaders from cities, utilities, regulators and industry, including 40 cities, to exchange experiences, share case studies and facilitate peer-to-peer learning in tackling such climate challenges.

Delegate registration opens on 3 March 2025. Visit www.siww.com.sg/spotlight-2025 for more information.

ABOUT THE CO-ORGANISERS

PUB is a statutory board under the Ministry of Sustainability and the Environment (MSE). It is the national water agency, which manages Singapore's water supply, water catchment, and used water in an integrated way. From April 2020, PUB also took on the responsibility of protecting Singapore's coastline from sea-level rise as the national coastal protection agency.

PUB has ensured a diversified and sustainable supply of water for Singapore with the Four National Taps (local catchment water, imported water, NEWater, desalinated water). PUB leads and coordinates whole-of-government efforts to protect Singapore from the threat of rising seas and the holistic management of inland and coastal flood risks.

PUB calls on everyone to play a part in conserving water, in keeping our waterways clean, and in caring for Singapore's precious water resources. If we all do our little bit, there will be enough water for all our needs – for commerce and industry, for living, for life.

A research-intensive public university, Nanyang Technological University, Singapore (NTU Singapore) has 33,000 undergraduate and postgraduate students in the Engineering, Business, Science, Medicine, Humanities, Arts, & Social Sciences, and Graduate colleges.

NTU is also home to world-renowned autonomous institutes – the National Institute of Education, S Rajaratnam School of International Studies, Earth Observatory of Singapore, and Singapore Centre for Environmental Life Sciences Engineering – and various leading research centres such as the Nanyang Environment & Water Research Institute (NEWRI) and Energy Research Institute @ NTU (ERI@N).

Under the NTU Smart Campus vision, the University harnesses the power of digital technology and tech-enabled solutions to support better learning and living experiences, the discovery of new knowledge, and the sustainability of resources.

Ranked amongst the world's top universities, the University's main campus is also frequently listed among the world's most beautiful. Known for its sustainability, over 95% of its building projects are certified Green Mark Platinum. Apart from its main campus, NTU also has a medical campus in Novena, Singapore's healthcare district.

For more information, visit www.ntu.edu.sg.

The National University of Singapore (NUS) is Singapore's flagship university, which offers a global approach to education, research and entrepreneurship, with a focus on Asian perspectives and expertise. We have 17 faculties across three campuses in Singapore, with more than 40,000 students from 100 countries enriching our vibrant and diverse campus community. We have also established our NUS Overseas Colleges programme in more than15 cities around the world.

Our multidisciplinary and real-world approach to education, research and entrepreneurship enables us to work closely with industry, governments and academia to address crucial and complex issues relevant to Asia and the world. Researchers in our faculties, 30 university-level research institutes, research centres of excellence and corporate labs focus on themes that include energy; environmental and urban sustainability; treatment and prevention of diseases; active ageing; advanced materials; risk management and resilience of financial systems; Asian studies; and Smart Nation capabilities such as artificial intelligence, data science, operations research and cybersecurity.

For more information on NUS, please visit www.nus.edu.sg.

International Association for Hydro-Environment Engineering and Research

The International Association for Hydro-Environment Engineering and Research (IAHR), founded in 1935, is a worldwide independent organisation of engineers and water specialists working in fields related to the hydro-environmental sciences and their practical application. Activities range from river and maritime hydraulics to water resources development and eco-hydraulics, through to ice engineering, hydro-informatics and continuing education and training. IAHR stimulates and promotes both research and its application and by doing so it strives to contribute to sustainable development, the optimisation of world water resources management and industrial flow processes.

IAHR accomplishes its goals through a wide variety of member activities including working groups, a robust research agenda, congresses, specialty conferences, workshops and short courses; journals, monographs and proceedings; by involvement in international programs such as UNESCO, WMO, IDNDR, GWP, ICSU and by co-operation with other water-related international organizations.

For more information on IAHR, please visit www.iahr.org
